Behavior of Marine Animals Howard E. Winn, Bori L. Olla, Joanna Burger, 1972 *Behavior of Marine Animals* Howard E. Winn, 1979 *Behavior of Marine Animals* Joanna Burger, Bori L. Olla, Howard E. Winn, 2013-11-21

The majority of the chapters in this volume are structured to include a balance between literature review, original data, and synthesis. The research approaches taken by the authors are generally of two kinds. One centers on the long term in depth study of a single species in which many aspects of its natural history are examined in detail. The other is a comparative one which involves investigating particular questions by examining species or by comparing groups of species that may include taxonomic and/or ecological affinities. Most of the chapters concern obvious aspects of breeding behavior including habitat selection, the effects of age on breeding, communication, mating systems, synchrony of breeding activities, development of behavior, pre-fledging parental care, and post-fledging parental care. Of these topics, many relate directly to the advantages and disadvantages of coloniality, a conspicuous behavior pattern in marine birds. As such, they provide a paradigm for the further study of coloniality and the social behavior of many other animals. Other important areas of marine bird breeding behavior such as courtship behavior, anti-predator behavior, information transfer, have not been included because of space limitations. Since man's encroachment on the seashore and continental shelf poses certain threats to marine birds, a volume elucidating various aspects of their biology has multiple uses. As well as being of value to ornithologists, the volume should be useful to managers involved with coastal planning.

Behavior of Marine Animals Howard E. Winn, Bori L. Olla, 2012-02-19

What have been brought together in these volumes are works representing a variety of modern quantitative studies on a select group of marine organisms. Some of the species studied here represent basic biological experimental subjects in some cases, marine versions of the white rat and pigeon that are being used for a wide range of studies. Other species studied were virtually unknown as experimental animals. The authors have studied their animals in considerable depth, often in both the field and the laboratory. It is this cross reference between real life and the artificial but controlled conditions of the laboratory which gives us the necessary understanding and ultimately the means for improving our rapidly deteriorating environment, a must for man's survival, maintenance, and improvement of the quality of living standards. A direct outgrowth of a AAAS symposium entitled Recent Advances in the Behavior of Marine Organisms held in December 1966, these volumes include a reasonable balance between review and original unpublished research. Of the many persons who have made these volumes possible, we wish to especially thank Nancy Fish, Lois Winn, Mabel Trafford, and Deborah Brennan. The latter two accomplished most of the final editorial work. The personnel of Plenum Press were cooperative in all aspects of our relationship. Only the two editors are responsible for defects in the volumes. We believe the papers presented are significant and will be of importance to members of the scientific community.

Biology of Marine Birds E. A. Schreiber, Joanna Burger, 2001-08-16 *Biology of Marine Birds* provides the only complete summary of information about marine birds ever published. It analyzes their breeding biology ecology taxonomy evolution fossil history physiology energetics and conservation. The book covers four orders of marine birds in detail and includes two summary chapters that address the biology of shorebirds and wading birds and their lives in the marine environment. Summary tables give detailed information on various aspects of their life histories breeding biology physiology and energetics and demography. It provides a guide to ornithologists and students for research projects.
