Winn, Bori L. Olla, 2012-12-06 What have been brought together in these volumes are works representing a variety of modern quantitative studies on a select group of marine organisms Some of the species studied here represent basic biological experimental subjects in some cases marine versions of the white rat and pigeon that are being used for a wide range of studies Other species studied were virtually unknown as experimental animals The authors have studied their animals in considerable depth often in both the field and the laboratory It is this cross reference between real life and the artificial but controlled conditions of the laboratory which gives us the necessary understanding and ultimately the means for improving our rapidly deteriorating environment a must for man's survival maintenance and improvement of the quality of living standards A direct outgrowth of a AAAS symposium entitled Recent Advances in the Behavior of Marine Organisms held in December 1966 these volumes include a reasonable balance between review and original unpublished research Of the many persons who have made these volumes possible we wish to especially thank Nancy Fish Lois Wino Mabel Trafford and Deborah Brennan The latter two accomplished most of the final editorial work The personnel of Plenum Press were cooperative in all aspects of our relationship Only the two editors are responsible for defects in the volumes We believe the papers presented are significant and will be of importance to members of the scientific community **Wildlife Review**, 1986 **Ethology and Behavioral Ecology of Mysticetes** Christopher W. Clark, Ellen C. Garland, 2022-07-02 In this book an international team of leading marine mammal scientists with a remarkably diverse set of

backgrounds and areas of expertise lead you through a synthesis of current knowledge on baleen whales. Baleen whales are the largest animals ever to have lived on this planet. They also have the lowest and most intense voices on Earth, most likely evolved to take advantage of ocean acoustic transmission conditions so as to be detectable across ocean basins. Some baleen whales can live to be 150–200 years old. They migrate many thousands of kilometers between feeding and breeding areas. They produce songs and calls that serve as behavioral foundations for establishing, maintaining, and expanding their cultural identities. To conclude that we know the behavioral limits of these large-brained, long-lived animals would be naïve. As baleen whale scientists, we are still beginning to comprehend the enormous complexities and natural histories of these remarkable animals. Today, the fact that whales sing is known throughout much of the world. This awareness started 50 years ago with the publication and popularization of a collection of humpback song recordings that motivated research into baleen whale behavioral ethology. In this book's chapters, a reader's experiences will stretch from learning about baleen whale laryngeal anatomy associated with their different voices to learning about the vast ocean areas over which their voices can be heard and the emerging complexities of their culturally defined societies. These are accompanied by chapters on the fundamental ethological contexts of socializing, migrating, and foraging. Two common themes permeate the book. One theme highlights the phenomenal increase in scientific knowledge achieved through technological advancements. The other theme recognizes the impacts of human-made activities on ocean acoustic environments and the resultant influences on the health and survival of individual whales and their populations. Although the book is intentionally ambitious in its scope, as scientists, we fully recognize that baleen whale science is still in its infancy. Many profound revelations await discovery by cohorts of young, multi-talented explorers, some of whom are stretching their wings in this volume and some of whom are reading these scientific stories for the first time.
