Capture-Recapture Methods for the Social and Medical Sciences Dankmar Böhning, Peter G.M. van der Heijden, John Bunge, 2017-07-28 Capture-recapture methods have been used in biology and ecology for more than 100 years. However, it is only recently that these methods have become popular in the social and medical sciences to estimate the size of elusive populations such as illegal immigrants, illicit drug users, or people with a drinking problem. *Capture-Recapture Methods for the Social and Medical Sciences* brings together important developments which allow the application of these methods. It has contributions from more than 40 researchers and is divided into eight parts including topics such as ratio regression models, capture-recapture meta-analysis, extensions of single and multiple source models, latent variable models, and Bayesian approaches. The book is suitable for everyone who is interested in applying capture-recapture methods in the social and medical sciences. Furthermore, it is also of interest to those working with capture-recapture methods in biology and ecology, as there are some important developments covered in the book that also apply to these classical application areas.

Eguíluz, Claudio Mirasso, Raul Vicente, 2021-03-03 *Probabilistic Finite Element Model Updating Using Bayesian Statistics* Tshilidzi Marwala, Ilyes Boulkaibet, Sondipon Adhikari, 2016-09-23 *Probabilistic Finite Element Model Updating Using Bayesian Statistics: Applications to Aeronautical and Mechanical Engineering* Tshilidzi Marwala and Ilyes Boulkaibet University of Johannesburg South Africa, Sondipon Adhikari Swansea University UK. Covers the probabilistic finite element model based on Bayesian statistics with applications to aeronautical and mechanical engineering. Finite element models are used widely to model the dynamic behaviour of many systems including in electrical, aerospace and mechanical engineering. The book covers probabilistic finite element model updating achieved using Bayesian statistics. The Bayesian framework is employed to estimate the probabilistic finite element models which take into account of the uncertainties in the measurements and the modelling procedure. The Bayesian formulation achieves this by formulating the finite element model as the posterior distribution of the model given the measured data within the context of computational statistics and applies these in aeronautical and mechanical engineering. *Probabilistic Finite Element Model Updating Using Bayesian Statistics* contains simple explanations of computational statistical techniques such as Metropolis-Hastings Algorithm, Slice sampling, Markov Chain Monte Carlo method, hybrid Monte Carlo as well as Shadow Hybrid Monte Carlo and their relevance in engineering. Key features: Contains several contributions in the area of model updating using Bayesian techniques which are useful for graduate students. Explains in detail the use of Bayesian techniques to quantify uncertainties in mechanical structures as well as the use of Markov Chain Monte Carlo techniques to evaluate the Bayesian formulations. The book is essential reading for researchers, practitioners and students in mechanical and aerospace engineering. **Computational Statistical Methodologies and Modeling for Artificial Intelligence** Priyanka Harjule, Azizur Rahman, Basant
