Breeding Strategies For Sustainable Forage And Turf Grass Improvement:

Breeding strategies for sustainable forage and turf grass improvement Susanne Barth, Dan Milbourn, 2012-07-25 From the 4th 8th of September 2011 the Eucarpia Fodder Crops and Amenity Grasses Section held its 29th Meeting in the surroundings of Dublin Castle in Ireland The theme of the meeting was Breeding strategies for sustainable forage and turf grass improvement Grasslands cover a significant proportion of the land mass of the world and play a pivotal role in global food production At the same time we are faced with several challenges that affect the way in which we think about this valuable set of resources The population of the world is expected to exceed 9 billion by 2050 and increase of about one third relative to today's levels This population increase will be focused in urban areas and in what are currently viewed as developing countries meaning that the buying power of this increased population will be greater shifting the balance of demand from staple crops to high value items such as meat and dairy products Overall that the world will have to approximately double agricultural output across all categories of food to meet the demands of this larger urbanised population This is occurring against a backdrop of equally large challenges in terms of global climate change Agriculture is already a significant contributor to e.g. greenhouse gas emissions deforestation and soil erosion The situation is made more complex by an increased emphasis on biofuels as a solution for our imminent oil shortage resulting in increased competition between land utilised for food and fuel In short agriculture must continue to feed the world whilst not contributing to damaging it further It must be sustainable Plant breeding plays a significant but frequently understated role in meeting the challenges presented by this complex and changing scenario However plant breeding and improvement is itself undergoing radical change driven by technology This book explores how forage and turf breeding is changing and adapting to meet these challenges using the technological advances being experienced in plant breeding as a whole Quantitative Traits Breeding for Multifunctional Grasslands and Turf Dejan Sokolović, Christian Huyghe, Jasmina Radović, 2014-09-12 Grasslands are among the largest ecosystems in the world and consequently are of great importance to mankind The genotypes of the species which are the main components of the grasslands have great influence on total outcome and successful utilization of grasslands Therefore fodder crops and turf swards should be constantly improved to follow modern trends in agriculture production and landscape architecture The wide range of breeding programs for forage and amenity species as well as new breeding methods and techniques is rapidly expanding the boundaries and is making it possible to achieve outstanding breeding results This book includes papers presented at the 30th EUCARPIA Fodder Crops and Amenity Grasses Section Meeting The challenging title of the book focuses on breeding of quantitative traits which directly impact the profitability and sustainability of grasslands and fodder crops production as well as on multidisciplinary approach in grassland research and utilisation Included papers offer a unique collection of ideas and breakthroughs in the fields of fodder crops and amenity grasses breeding and genetics as well as in the creative and innovative application of new tools in practical breeding

Festulolium David Kopecký, Arkadiusz Kosmala, A special issue of *Biologia Plantarum* entitled *Festulolium* from the nature to modern breeding This special issue contains 14 articles including eleven original research papers and three reviews which are focused on genetics ecology physiology biotechnology and the breeding value of *Festulolium* and various species within the *Festuca Lolium* complex *Breeding in a World of Scarcity* Isabel Roldán-Ruiz, Joost Baert, Dirk Reheul, 2016-06-13 This book includes papers presented at the 2015 meeting of the Fodder Crops and Amenity Grasses Section of Eucarpia The theme of the meeting Breeding in a world of scarcity was elaborated in four sessions 1 scarcity of natural resources 2 scarcity of breeders 3 scarcity of land and 4 scarcity of focus Parts I to IV of this book correspond to these four sessions Session 1 refers to the consequences of climate change reduced access to natural resources and declining freedom in using them Plant breeding may help by developing varieties with a more efficient use of water and nutrients and a better tolerance to biotic and abiotic stresses Session 2 refers to the shrinking number of field breeders There is a need for a mutual empathy between field and lab oriented breeding activities integrating new methods of phenotyping and genotyping Session 3 underscores the optimal use of agricultural land Forage needs to be intensively produced in a sustainable way meeting the energy protein and health requirements of livestock Well adapted varieties species and mixtures of grasses and legumes are needed Session 4 refers to the fading of focus in primary production triggered by a range of societal demands There are few farmers left and they are asked to meet many consumer demands Both large scale multi purpose species and varieties and specialized niche crops are required Part V summarizes the conclusions of two open debates two working group meetings and two workshops held during the conference The debates were devoted to the future of grass and fodder crop breeding and to feed quality breeding and testing The conference hosted meetings of the working groups Multisite rust evaluation and *Festulolium* Workshops focused on genomic selection and association mapping and on phenotyping with applications in practical breeding research Part V contains also short sketches of breeding ideas presented as short communications
