Arduino Repeater Controller:

Get Started With Arduino The Makers of HackSpace magazine, 2019-01-01 Arduino and Arduino compatible microcontrollers are essentially simple computers that we can easily embed in our projects. They enable us to sense input and create output in a huge number of ways. Buttons, touch-sensitive areas, environmental sensors, and more can feed into these computers. Lights, sound, movements, and more can feed out. Controlling these with a little bit of programmable logic allows us to create devices with a huge range of interactions. This all sounds very computer-y, but Arduinos are designed to be embedded, so are often hidden away in things that don't look like computers. We look at some fantastic projects that showcase the range of things you can make with these microcontrollers. It's become a cliché to say that the only limit is your imagination, but these boards are sufficiently powerful and flexible to mean that it's very nearly true. You can add interactions, simple or complex, to almost any project. What's even better is that they're designed to be easy to use. Projects include: Build a four-legged walking robot, Create a Tetris-inspired clock, Grow your own veg with hydroponics, Make music with a DIY synthesizer. And much more. Now that you've picked up this book, it's time to get started and create your own amazing Arduino project.

Practical IoT using Arduino and ESP32 Pravin Dhandre, 2025-02-15 This handy book will get you up and running with Arduino and ESP32 in no time, teaching you how to think, design, and build real-world IoT applications. You'll start by exploring the Uno and ESP32 boards, identifying pins, and powering sensors and LEDs. Then you get the Arduino IDE up and running, handle libraries and flags, and learn how to write, upload, and debug sketches. You'll be working on building some key C skills, like handling data types, loops, functions, and classes, and you'll be doing all of this without getting stuck. Then you move on to sensors, where you're reading digital and analog signals, calibrating measurements, scaling values, and filtering noise. You'll be driving I2C and SPI displays for clear visual feedback. Next, we'll dive into camera modules, where you'll learn how to wire an OV7670 or ESP32 CAM, capture and compress images, save them to SPIFFS or SD, and run basic image analysis. There are wireless chapters that teach Wi-Fi, HTTPS with JSON, MQTT messaging, Bluetooth LE vs. Classic, and token-based security. Later on, you'll find chapters about Cloud and low-power stuff, like JSON, building AWS IoT Core connections, live dashboards with WebSockets, and Node-RED. Google Sheets logging and deep sleep with batched updates. And the final projects really tie it all together: a temperature monitor that notifies the cloud, an OLED QR code generator, an ethical Wi-Fi jamming demo, and an RTC alarm clock with mobile notifications. All of our projects combine wiring, code, networking, and power management, so you'll gain real-world IoT skills without claiming total mastery. Key Learnings: Use Uno and ESP32 pins for sensors, power, and communication. Set up Arduino IDE, boards, libraries, and compile flags effectively. Use C to create efficient programs with loops, functions, and classes. Also, use non-blocking timing. Read, calibrate, and filter the sensor data to get accurate measurements. Get clear visual feedback by driving I2C/SPI displays with Adafruit GFX. Capture and process images using OV7670 or ESP32 CAM modules. Enable Wi-Fi, HTTPS, MQTT, and Bluetooth for secure IoT communication. Combine AWS IoT

and Node RED to create real time data dashboards Log to Google Sheets and extend your battery life with deep sleep Build projects like cloud alerts QR codes Wi Fi jamming and RTC alarms Table of Content UNO ESP32 Overview Arduino IDE Toolchain C Fundamentals for Sketches Digital Analog Sensors Displays User Interfaces Camera Image Handling WiFi Bluetooth Networking IoT Protocols Cloud Smart IoT Projects
