Agent Based Computational Modelling Agent Based Computational Modelling:

Agent-Based Computational Modelling Francesco C. Billari, 2006-03-13 The present book describes the methodology to set up agent based models and to study emerging patterns in complex adaptive systems resulting from multi agent interaction It offers the application of agent based models in demography social and economic sciences and environmental sciences Examples include population dynamics evolution of social norms communication structures patterns in eco systems and socio biology natural resource management spread of diseases and development processes It presents and combines different approaches how to implement agent based computational models and tools in an integrative manner that can be extended to other cases

Generative Social Science Joshua M. Epstein, 2012-01-02 Agent based computational modeling is changing the face of social science In *Generative Social Science* Joshua Epstein argues that this powerful novel technique permits the social sciences to meet a fundamentally new standard of explanation in which one grows the phenomenon of interest in an artificial society of interacting agents heterogeneous boundedly rational actors represented as mathematical or software objects After elaborating this notion of generative explanation in a pair of overarching foundational chapters Epstein illustrates it with examples chosen from such far flung fields as archaeology civil conflict the evolution of norms epidemiology retirement economics spatial games and organizational adaptation In elegant chapter preludes he explains how these widely diverse modeling studies support his sweeping case for generative explanation This book represents a powerful consolidation of Epstein's interdisciplinary research activities in the decade since the publication of his and Robert Axtell's landmark volume *Growing Artificial Societies* Beautifully illustrated *Generative Social Science* includes a CD that contains animated movies of core model runs and programs allowing users to easily change assumptions and explore models making it an invaluable text for courses in modeling at all levels

How Do I Develop an Agent-Based Model? Secchi, Davide, 2022-04-21 This clear and coherent book introduces agent based modelling ABM to those who are not familiar with nor have been previously exposed to computational simulation Featuring examples cases and models the book illustrates how ABM can and should be considered as a useful approach and technique for the study of management and organisational systems

Agent-Based Computational Economics Using NetLogo Romulus-Catalin Damaceanu, 2013-02-01 Agent based Computational Economics using NetLogo explores how researchers can create use and implement multi agent computational models in Economics by using NetLogo software platform Problems of economic science can be solved using multi agent modelling MAM This technique uses a computer model to simulate the actions and interactions of autonomous entities in a network in order to analyze the effects on the entire economic system MAM combines elements of game theory complex systems emergence and evolutionary programming The Monte Carlo method is also used in this e book to introduce random elements The 11 models presented in this text simulate the simultaneous operations of several agents in an attempt to recreate and predict complex economic phenomena This e book explains the topic in a systematic manner starting with an

introduction for readers followed subsequently by methodology and implementation using NetLogo The volume ends with conclusions based on the results of the experiments presented The e book is intended as a concise and vital resource for economists applied mathematicians social sciences scientists systems analysts operations researchers and numerical analysts

Agent-Based Models in Economics Domenico Delli Gatti, Giorgio Fagiolo, Mauro Gallegati, Matteo Richiardi, Alberto Russo, 2018-03-22 In contrast to mainstream economics complexity theory conceives the economy as a complex system of heterogeneous interacting agents characterised by limited information and bounded rationality Agent Based Models ABMs are the analytical and computational tools developed by the proponents of this emerging methodology Aimed at students and scholars of contemporary economics this book includes a comprehensive toolkit for agent based computational economics now quickly becoming the new way to study evolving economic systems Leading scholars in the field explain how ABMs can be applied fruitfully to many real world economic examples and represent a great advancement over mainstream approaches The essays discuss the methodological bases of agent based approaches and demonstrate step by step how to build simulate and analyse ABMs and how to validate their outputs empirically using the data They also present a wide set of applications of these models to key economic topics including the business cycle labour markets and economic growth *Agent-Based Computational Demography* Francesco C. Billari, Alexia Prskawetz, 2012-12-06 Agent Based Computational Demography ABCD aims at starting a new stream of research among social scientists whose interests lie in understanding demographic behaviour The book takes a micro demographic agent based perspective and illustrates the potentialities of computer simulation as an aid in theory building The chapters of the book written by leading experts either in demography or in agent based modelling address several key questions Why do we need agent based computational demography How can ABCD be applied to the study of migrations family demography and historical demography What are the peculiarities of agent based models as applied to the demography of human populations ABCD is of interest to all scientists interested in studying demographic behaviour as well as to computer scientists and modellers who are looking for a promising field of application

Agent-Based Computational Economics Shu-Heng Chen, 2017-09-19 This book aims to answer two questions that are fundamental to the study of agent based economic models what is agent based computational economics and why do we need agent based economic modelling of economy This book provides a review of the development of agent based computational economics ACE from a perspective on how artificial economic agents are designed under the influences of complex sciences experimental economics artificial intelligence evolutionary biology psychology anthropology and neuroscience This book begins with a historical review of ACE by tracing its origins From a modelling viewpoint ACE brings truly decentralized procedures into market analysis from a single market to the whole economy This book also reviews how experimental economics and artificial intelligence have shaped the development of ACE For the former the book discusses how ACE models can be used to analyse the economic consequences of cognitive capacity personality and cultural inheritance For the

latter the book covers the various tools used to construct artificial adaptive agents including reinforcement learning fuzzy decision rules neural networks and evolutionary computation This book will be of interest to graduate students researching computational economics experimental economics behavioural economics and research methodology **Advanced**
