Algebras, Rings and Modules Michiel Hazewinkel, Nadiya Gubareni, V.V. Kirichenko, 2010-11-30 This second volume of this text covers the classical aspects of the theory of groups and their representations It also offers a general introduction to the modern theory of representations including the representations of quivers and finite partially ordered sets and their applications to finite dimensional algebras It reviews key recent developments in the theory of special ring classes including Frobenius quasi Frobenius and others

Algebras, Rings and Modules, Volume 2 Michiel Hazewinkel, Nadiya M. Gubareni, 2017-04-11 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century This is the second volume of Algebras Rings and Modules Non commutative Algebras and Rings by M Hazewinkel and N Gubareni is a continuation stressing the more important recent results on advanced topics of the structural theory of associative algebras rings and modules

Roman, 2014-02-21 This volume contains the proceedings of the Ring Theory Session in honor of T Y Lam's 70th birthday at the 31st Ohio State Denison Mathematics Conference held from May 25-27 2012 at The Ohio State University Columbus Ohio Included are expository articles and research papers covering topics such as cyclically presented modules Eggert's conjecture the Mittag-Leffler conditions clean rings McCoy rings QF rings projective and injective modules Baer modules and Leavitt path algebras Graduate students and researchers in many areas of algebra will find this volume valuable as the papers point out many directions for future work in particular several articles contain explicit lists of open questions

The Concise Handbook of Algebra Alexander V. Mikhalev, G.F. Pilz, 2013-06-29 It is by no means clear what comprises the heart or core of algebra the part of algebra which every algebraist should know Hence we feel that a book on our heart might be useful We have tried to catch this heart in a collection of about 150 short sections written by leading algebraists in these areas These sections are organized in 9 chapters A B I Of course the selection is partly based on personal preferences and we ask you for your understanding if some selections do not meet your taste for unknown reasons we only had problems in the chapter Groups to get enough articles in time We hope that this book sets up a standard of what all algebraists are supposed to know in their chapters interested people from other areas should be able to get a quick idea about the area So the target group consists of

anyone interested in algebra from graduate students to established researchers including those who want to obtain a quick overview or a better understanding of our selected topics The prerequisites are something like the contents of standard textbooks on higher algebra This book should also enable the reader to read the big Handbook Hazewinkel 1999 and other handbooks In case of multiple authors the authors are listed alphabetically so their order has nothing to do with the amounts of their contributions

Algebra and Its Applications Dinh Van Huynh, Surender Kumar Jain, Sergio R. López-Permouth, 2000 Among all areas of mathematics algebra is one of the best suited to find applications within the frame of our booming technological society The thirty eight articles in this volume encompass the proceedings of the International Conference on Algebra and Its Applications Athens OH 1999 which explored the applications and interplay among the disciplines of ring theory linear algebra and coding theory The presentations collected here reflect the dialogue between mathematicians involved in theoretical aspects of algebra and mathematicians involved in solving problems where state of the art research tools may be used and applied This Contemporary Mathematics series volume communicates the potential

for collaboration among those interested in exploring the wealth of applications for abstract algebra in fields such as information and coding The expository papers would serve well as supplemental reading in graduate seminars

Equivalence and Duality for Module Categories with Tilting and Cotilting for Rings Robert R. Colby, Kent R. Fuller, 2004-03-22 This book provides a unified approach to much of the theories of equivalence and duality between categories of modules that has transpired over the last 45 years In particular during the past dozen or so years many authors including the authors of this book have investigated relationships between categories of modules over a pair of rings that are induced by both covariant and contravariant representable functors in particular by tilting and cotilting theories By here collecting and unifying the basic results of these investigations with innovative and easily understandable proofs the authors aim is to provide an aid to further research in this central topic in abstract algebra and a reference for all whose research lies in this field Contributions in Algebra and Algebraic Geometry Shrikrishna G. Dani, Surender K. Jain, Jugal K.
