The background of the slide is a light blue gradient. It features faint, handwritten mathematical formulas in a cursive script, including summations like $\sum_{n=1}^{\infty} a_n$ and $\sum_{n=1}^{\infty} b_n$, and other expressions like $\sum_{n=1}^{\infty} a_n x^n$ and $\sum_{n=1}^{\infty} b_n x^n$. A prominent blue wavy line, resembling a stylized river or a mathematical curve, flows across the middle of the slide.

Applications of Model Theory to Functional Analysis Jose Iovino, 2014-09-08 The first self contained introduction to techniques of model theory this 2002 text presents material still not readily available elsewhere including Krivine's theorem and the Krivine Maurey theorem on stable Banach spaces *Applications of Model Theory to Functional Analysis* Jose Iovino, 2014-11-19 The first self contained introduction to techniques of model theory this 2002 text presents material still not readily available elsewhere including Krivine's theorem and the Krivine Maurey theorem on stable Banach spaces

Beyond First Order Model Theory José Iovino, 2017 **Beyond First Order Model Theory, Volume I** Jose Iovino, 2017-08-14 Model theory is one of the central branches of mathematical logic The field has evolved rapidly in the last few decades This book is an introduction to current trends in model theory and contains a collection of articles authored by top researchers in the field It is intended as a reference for students as well as senior researchers **Beyond First Order Model Theory, Volume I** Jose Iovino, 2017-08-14 Model theory is one of the central branches of mathematical logic The field has evolved rapidly in the last few decades This book is an introduction to current trends in model theory and contains a collection of articles authored by top researchers in the field It is intended as a reference for students as well as senior researchers **Mexican Mathematicians in the World** Fernando Galaz-García, Cecilia González-Tokman, Juan Carlos Pardo Millán, 2021-11-22 Articles in this volume are based on presentations given at the IV Meeting of Mexican Mathematicians Abroad IV Reunión de Matemáticos Mexicanos en el Mundo held from June 10-15 2018 at Casa Matemática Oaxaca CMO Mexico This meeting was the fourth in a series of ongoing biannual meetings bringing together Mexican mathematicians working abroad with their peers in Mexico This book features surveys and research articles from five broad research areas algebra analysis combinatorics geometry and topology Their topics range from general relativity and mathematical physics to interactions between logic and ergodic theory Several articles provide a panoramic view of the fields and problems on which the authors are currently working on showcasing diverse research lines complementary to those currently pursued in Mexico The research oriented manuscripts provide either alternative approaches to well known problems or new advances in active research fields *Beyond First Order Model Theory, Volume II* Jose Iovino, 2023-07-03 Model theory is the meta mathematical study of the concept of mathematical truth After Alfred Tarski coined the term Theory of Models in the early 1950's it rapidly became one of the central most active branches of mathematical logic In the last few decades ideas that originated within model theory have provided powerful tools to solve problems in a variety of areas of classical mathematics including algebra combinatorics geometry number theory and Banach space theory and operator theory The two volumes of *Beyond First Order Model Theory* present the reader with a fairly comprehensive vista rich in width and depth of some of the most active areas of contemporary research in model theory beyond the realm of the classical first order viewpoint Each chapter is intended to serve both as an introduction to a current direction in model theory and as a

presentation of results that are not available elsewhere All the articles are written so that they can be studied independently of one another This second volume contains introductions to real valued logic and applications abstract elementary classes and applications interconnections between model theory and function spaces nonstructure theory and model theory of second order logic Features A coherent introduction to current trends in model theory Contains articles by some of the most influential logicians of the last hundred years No other publication brings these distinguished authors together Suitable as a reference for advanced undergraduate postgraduates and researchers Material presented in the book e.g abstract elementary classes first order logics with dependent sorts and applications of infinitary logics in set theory is not easily accessible in the current literature The various chapters in the book can be studied independently *Ultrafilters*

Throughout Mathematics Isaac Goldbring, 2022-06-13 Ultrafilters and ultraproducts provide a useful generalization of the ordinary limit processes which have applications to many areas of mathematics Typically this topic is presented to students in specialized courses such as logic functional analysis or geometric group theory In this book the basic facts about ultrafilters and ultraproducts are presented to readers with no prior knowledge of the subject and then these techniques are applied to a wide variety of topics The first part of the book deals solely with ultrafilters and presents applications to voting theory combinatorics and topology while also dealing also with foundational issues The second part presents the classical ultraproduct construction and provides applications to algebra number theory and nonstandard analysis The third part discusses a metric generalization of the ultraproduct construction and gives example applications to geometric group theory and functional analysis The final section returns to more advanced topics of a more foundational nature The book should be of interest to undergraduates graduate students and researchers from all areas of mathematics interested in learning how ultrafilters and ultraproducts can be applied to their specialty *Analysis and Logic*

C. Ward Henson, 2002 This volume comprises articles from four outstanding researchers who work at the cusp of analysis and logic The emphasis is on active research topics many results are presented that have not been published before and open problems are formulated Considerable effort has been made by the authors to integrate their articles and make them accessible to mathematicians new to the area **Categoricity**

John T. Baldwin, 2009 Modern model theory began with Morley's categoricity theorem A countable first order theory that has a unique up to isomorphism model in one uncountable cardinal i.e is categorical in cardinality if and only if the same holds in all uncountable cardinals Over the last 35 years Shelah made great strides in extending this result to infinitary logic where the basic tool of compactness fails He invented the notion of an Abstract Elementary Class to give a unifying semantic account of theories in first order infinitary logic and with some generalized quantifiers Zilber developed similar techniques of infinitary model theory to study complex exponentiation This book provides the first unified and systematic exposition of this work The many examples stretch from pure model theory to module theory and covers of Abelian varieties Assuming only a first course in model theory the book expounds eventual categoricity results

for classes with amalgamation and categoricity in excellent classes. Such crucial tools as Ehrenfeucht Mostowski models, Galois types, tameness, omitting types theorems, multi dimensional amalgamation, atomic types, good sets, weak diamonds, and excellent classes are developed completely and methodically. The occasional reliance on extensions of basic set theory is clearly laid out. The book concludes with a set of open problems.
