Thomas Greiber, 2012 Oil Spills First Principles B. Ornitz†, M. Champ, 2002-06-18 Marine oil spills are no longer considered unavoidable accidents resulting from adverse environmental conditions or functions of catastrophic events More than 80% of all spills are the result of human error The focus of the current legal regulatory and convention framework affecting the transportation of oil by ship reflects a recent change in public attitude in which there is an insistence upon protection of the world's marine environments particularly coastal ecosystems The outcome of such global attention is the creation of significant legal and political motivators for a cultural shift by the oil shipping industry from an evasion culture to a safety culture The new safety culture connotes continuous improvement in ship operations and a willingness to adopt the evolving concepts of communication at all levels better trained and qualified personnel on board ship emphasis of safety from top down and proactive institution of safety management systems Mere compliance with international and national laws is no longer sufficient for future sustainable shipping These changes and advancements in understanding the science and engineering of oil spills are the focus of this book on Oil Spills First Principles They are Prevention based upon adoption of the safety culture and Best Response utilizing scientific technical and environmental data and information Over the past 30 years billions of US dollars have been spent in R D planning response and clean up of oil spills All of these efforts have focused on achieving Best Response The concept of time periods of Technology Windows of Opportunity for a given response and clean up technology has developed from the leadership and wisdom of researchers and responders from many nations using modeling of the weathering of spilled oil and technology effectiveness The Windows of Opportunity strategy provides a scientific basis for policy and decision making in oil spill planning response and training A global paradigm shift is needed to more effectively utilize and expedite the application of lessons learned in both prevention and clean up Recognition of economic political and legal benefits accruing from environmental protection is good for business and critical for sustainable shipping Compendium of Research Contracts and Reports United States. Office of Policy Development and Research, 1980 **Structural Integrity of Offshore Wind Turbines** Transportation Research Board, 2011-09-02 TRB Special Report 305 Structural Integrity of Offshore Wind Turbines Oversight of Design Fabrication and Installation explores the U S Department of the Interior's Bureau of Ocean Energy Management Regulation and Enforcement BOEMRE approach to overseeing the development and safe operation of wind turbines on the outer continental shelf with a focus on structural safety The committee that developed the report recommended that in order to facilitate the orderly development of offshore wind energy and support the stable economic

development of this nascent industry the United States needs a set of clear requirements that can accommodate future design development The report recommends that BOEMRE develop a set of requirements that establish goals and objectives with regard to structural integrity environmental performance and energy generation The committee found that the risks to human life and the environment associated with offshore wind farms are substantially lower than for other industries such as offshore oil and gas because offshore wind farms are primarily unmanned and contain minimal quantities of hazardous substances This finding implies that an approach with significantly less regulatory oversight may be taken for offshore wind farms Under this approach industry would be responsible for proposing sets of standards guidelines and recommended practices that meet the performance requirements established by BOEMRE The domestic industry can build on standards guidelines and practices developed in Europe where the offshore wind energy is further developed but will have to fill gaps such as the need to address wave and wind loadings encountered in hurricanes The report also includes findings and recommendations about the role that certified verification agents third party evaluators can play in reviewing packages of standards and project specific proposals
