Cytology is a unique subspecialty in anatomic pathology and plays a critical role in the diagnosis of a variety of benign and malignant lesions by using minimally invasive procedures such as fine needle aspiration brushing washing and lavage Cytology not only provides an accurate diagnosis of the lesion based on the cytomorphological evaluation at cellular level but also provides material for molecular characterization of a tumor for targeted therapy In the era of personalized medicine cytology has continued to grow and evolve as an important diagnostic tool For example some types of procedures are routinely used diagnostic criteria have become more refined and certain terminology has been changed based on current WHO classifications Therefore it is necessary to update our knowledge and terminology in cytology In this volume we have retained the quality and the clarity of the series and like the other volumes this volume aims to be concise and comprehensive yet clinically relevant to daily practice Although this volume is written by multiple authors all chapters follow a similar format brief introduction of the specific organ system including types of specimens and techniques to obtain samples description of normal findings and a practice approach to diagnose benign and malignant lesions In each chapter the key cytomorphological feature and main differential diagnoses of the lesion are summarized in a concise table Images in each chapter are instructive and clearly represent findings Where necessary we have also illustrated the important ancillary tests such as flow cytometry immunohistochemistry and molecular analysis which are crucial for an accurate diagnosis and targeted therapy The updated knowledge including key cytomorphological features current terminology and molecular diagnostic tests is the highlight of this volume Gynaecological Cytology Mathilde E.
