

INSTALLATION INSTRUCTIONS

275+ & 300+ STREET / STRIP DIGITAL MULTI-STRIKE CD IGNITION CONTROLLER

GENERAL INFORMATION

The features of the 275+ and 300+ Ignitions are the same, with one exception: the 300+ includes a single stage RPM limiter. You can set various RPM limits using switches that are accessible through the end plate. See page 4 of this instruction book for more information about the rev limiting features of the 300+.

Battery

The 275+ and 300+ Ignition Controls operate on any negative ground, 12 volt electrical system with a distributor. It will also work with 16 volt batteries and can withstand a momentary spike of 24 volts in case of jump starts. This system delivers full voltage with a supply of 10-18 volts, and operates with a supply voltage as low as 8 volts. If your application does not use an alternator, allow at least 15 amp/hour for every half hour of operation. If you crank the engine with the same battery or other accessories, such as an electric fuel or water pump, increase the amp/hour rating.

Coils

For optimum performance with your 275+ or 300+ Ignition Controls, we recommend ACCEL P/N 140019 Coil, as well as most stock coils or aftermarket coils designed as stock replacements or CD-type coils.

NOTE: Do not use ACCEL's Drag Race Coil P/N 140030.

Tachometers

The green wire on the 275+ and 300+ Ignition Controls provides a trigger signal for tachometers, shift lights, or other add-on RPM activated devices. This wire produces a 12 volts square wave signal with a 20% duty cycle.

Some vehicles with factory tachometers may require a tach adapter to work with the 275+ and 300+ Ignition Controls. If your GM vehicle uses an inline filter, it may cause the tach to drop to zero on acceleration. If this occurs, bypass the filter. For more information on tachometers, see page 3.

Spark Plugs

Using the correct spark plug and heat range is important for optimum performance. Because there are so many variables to consider, we suggest starting with your engine manufacturer's spark plug recommendation. From there, you can experiment with small changes in plug gap and heat range to obtain the best performance from your engine.

Foreign Vehicles

Because of modern fuel injection systems, some foreign vehicles may require a tachometer/fuel injection adapter to work with the 275+ or 300+ Ignition Controls.

NOTE: Do not install the 275+ or 300+ Ignition Controls in any vehicle that is originally equipped with a CD ignition control.

Spark Plug Wires

High quality, spiral wound wire and proper routing are essential to the operation of the 275+ and 300+ Ignition Controls. This type of wire provides a good path for the spark to follow while minimizing electromagnetic interference (EMI).

NOTE: Do not use solid core spark plug wires with the 275+ or 300+ Ignition Controls.

Routing

Wires should be routed away from sharp edges, moving objects, and heat sources. Wires that are next to each other in the engine's firing order should be separated. For example, in a Chevy V8 with a firing order of 1-8-4-3-6-5-7-2, the #5 and #7 cylinders are positioned next to each other on the engine as well as in the firing order. Voltage from the #5 wire could jump to the #7 wire. This could cause detonation and engine damage.

For added protection against cross-fire, ACCEL offers PRO SLEEVE insulated sleeving. PRO SLEEVE is a glass woven, silicone coated protective sleeve that slides over your plug wires. It also helps reduce damage from heat and sharp objects.

MISCELLANEOUS INFORMATION

Sealing

Do not attempt to seal the 275+ or 300+ Ignition Controls. All of the circuits of a 275+ and 300+ receive a conformal coating of sealant that protects the electronics from moisture. Sealing the 275+ and 300+ will not allow any moisture that seeps in through the grommets to drain and may result in corrosion.

Welding

To avoid any damage to the 275+ or 300+ Ignition Controls when welding on the vehicle, disconnect both the 4-pin flat and 4-pin square connectors. It is also a good idea to disconnect the tachometer ground wire as well.

Distributor Cap and Rotor

We recommend installing a new distributor cap and rotor when installing the 275+ or 300+ Ignition Controls. Be sure the cap is clean inside and out, especially the terminals and rotor tip. On vehicles with smaller caps, it is possible for the air inside the cap to become electrically charged causing crossfire which can result in misfire. You can prevent this by drilling a couple of vent holes in the cap.
