Atlas Of Vertebrate Cells In Tissue Culture:

Atlas of Vertebrate Cells in Tissue Culture George G. Rose, 1970 *Tissue Culture* Paul F. Jr. Kruse, 2012-12-02
Tissue Culture Methods and Applications presents an overview of the procedures for working with cells in culture and for using them in a wide variety of scientific disciplines The book discusses primary tissue dissociation the preparation of primary cultures cell harvesting and replicate culture methods The text also describes protocols on single cell isolations and cloning perfusion and mass culture techniques cell propagation on miscellaneous culture supports and the evaluation of culture dynamics The recent techniques facilitating microscopic observation of cells cell hybridization and virus propagation and assay are also encompassed The book further tackles the production of hormones and intercellular substances the diagnosis and understanding of disease as well as quality control measures Scientists and professionals interested in methodology per se will find the book invaluable **Cell and Tissue Culture** John Paul, 1975 **Current Catalog** National Library of Medicine (U.S.), 1983 First multi year cumulation covers six years 1965 70 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1971 *Morphogenesis of Thyroid Follicles in Vitro* P. Cau, M. Michel-Bechet, G. Fayet, 2012-12-06 The thyroid gland first appears in the phylogenic scale in the Lamprey larva *Ammocoetes* at the time of metamorphosis see review by Constantinescu 1972 In higher Vertebrates the adult thyroid gland consists of vesicles i e thyroid follicles containing colloid and lined with a cubic or prismatic epithelium Since the end of the 19th century many authors have studied the morphogenesis of the follicles during the embryonic and fetal development of the gland in Man and other species principally Chick Rat and Rabbit The development of techniques for culturing organs of higher animals in particular the thyroid by Carrel and Burrows 1910 and Champy 1914 1915 allowed the study of the survival in vivo or in vitro of grafts or explants of thyroid gland obtained from adult or fetal animals In addition to organotypic cultures techniques for culturing cell suspensions obtained by enzymatic dissociation have recently been refined Moreover histological examination of pathological human glands and adult thyroids experimentally stimulated by thyrotropin hormone TSH has provided additional data for the understanding of thyroid follicle morphogenesis *Human Tumor Cells in Vitro* Jorgen Fogh, 2013-06-29 The study of cultured human tumor cells is a most obvious approach in experimental human cancer research For many techniques in virology immunology biochemistry and biophysics for example large amounts of cells may be required and such quantities are usually provided only when the cultures develop into established cell lines when this happens thorough characterization also becomes possible The development of cell lines therefore is of prime importance Recent major advances in research with animal cell systems seem to be a prologue for present and future efforts directed toward work with human tumor cells in culture Conceivably the most significant results in cancer research may develop from work with such cells and so the time seemed right to define the present state of our knowledge This is the first book dedicated exclusively to the subject human tumor cells in vitro Although some of the fundamental aspects in the cultivation

of human tumor cells and the extent to which they represent human cancer in vivo are still unclear I asked a number of the leading investigators in this area of research to collect and evaluate previous and present contributions and to offer their thoughts on the questions to which answers are not yet available Many of the chapters are concerned with techniques of cultivation Cultures from some types of tumors have grown well in many cases they have given rise to established cell lines
