Atmospheric and Space Flight Dynamics Ashish Tewari, 2007-11-15 Modern aerospace vehicles such as the space shuttle other launch vehicles and long range ballistic missiles do not discriminate between atmospheric and space flight Most texts on flight dynamics however make this artificial distinction and therefore do not simultaneously cover aircraft and spacecraft Bridging this gap in the literature Atmospheric and Space Flight Dynamics is a unified presentation demonstrating that the two disciplines have actually evolved from the same set of physical principles Key features include an introduction to a broad range of modern topics in an accessible yet mathematically rigorous presentation many numerical examples and simulations utilizing MATLAB and Simulink software used as an instructional hands on tool moving away from the cookbook approach found in other works and numerous illustrations and end of chapter exercises Primarily useful as a textbook for advanced undergraduate and beginning graduate level students the work is also an excellent reference or self study guide for researchers and practitioners in aerospace engineering aviation mechanical engineering dynamics astrodynamics aeronautics and astronautics

Computational Space Flight Mechanics Claus Weiland, 2010-06-29 The mechanics of space flight is an old discipline. Its topic originally was the motion of planets, moons, and other celestial bodies in gravitational fields. Kepler's 1571-1630 observations and measurements have led to probably the first mathematical description of planet's motion. Newton 1642-1727 gave then with the development of his principles of mechanics the physical explanation of these motions. Since then man has started in the second half of the 20th century to capture physically the Space in the sense that he did develop artificial celestial bodies which he brought into Earth's orbits like satellites or space stations or which he did send to planets or moons of our planetary system like probes or by which people were brought to the moon and back like capsules. Further he developed an advanced space transportation system the U.S. Space Shuttle Orbiter which is the only winged space vehicle ever in operation. In the last two and a half decades there were several activities in the world in order to succeed the U.S. Orbiter like the HERMES project in Europe, the HOPE project in Japan, the X-33, X-34, and X-37 studies and demonstrators in the United States and the joint U.S./European project X-38. However, all these projects were cancelled. The motion of these vehicles can be described by Newton's equation of motion Flight Mechanics/Estimation Theory Symposium, 1994 Kathy R. Hartman, 1994
