Hands-On Guide To IMAGE CLASSIFICATION Using Scikit-Learn, Keras, And TensorFlow with PYTHON GUI Vivian Siahaan, 2023-06-20 In this book implement deep learning on detecting face mask classifying weather and recognizing flower using TensorFlow Keras Scikit Learn OpenCV Pandas NumPy and other libraries In chapter 1 you will learn how to use TensorFlow Keras Scikit Learn OpenCV Pandas NumPy and other libraries to perform detecting face mask using Face Mask Detection Dataset provided by Kaggle <https://www.kaggle.com/omkargurav/face-mask-dataset-download> Here s an overview of

the steps involved in detecting face masks using the Face Mask Detection Dataset

Import the necessary libraries Import the required libraries like TensorFlow Keras Scikit Learn OpenCV Pandas and NumPy

Load and preprocess the dataset Load the dataset and perform any necessary preprocessing steps such as resizing images and converting labels into numeric representations

Split the dataset Split the dataset into training and testing sets using the `train_test_split` function from Scikit Learn This will allow us to evaluate the model's performance on unseen data

Data augmentation (optional) Apply data augmentation techniques to artificially increase the size and diversity of the training set Techniques like rotation zooming and flipping can help improve the model's generalization

Build the model Create a Convolutional Neural Network (CNN) model using TensorFlow and Keras

Design the architecture of the model including the number and type of layers

Compile the model Compile the model by specifying the loss function optimizer and evaluation metrics This prepares the model for training

Train the model Train the model on the training dataset

Adjust the hyperparameters such as the learning rate and number of epochs to achieve optimal performance

Evaluate the model Evaluate the trained model on the testing dataset to assess its performance

Calculate metrics such as accuracy precision recall and F1 score

Make predictions Use the trained model to make predictions on new images or video streams

Apply the face mask detection algorithm to identify whether a person is wearing a mask or not

Visualize the results Visualize the predictions by overlaying bounding boxes or markers on the images or video frames to indicate the presence or absence of face masks

In chapter 2 you will learn how to use TensorFlow Keras Scikit Learn OpenCV Pandas NumPy and other libraries to perform

How to classify weather using Multi class Weather Dataset provided by Kaggle <https://www.kaggle.com/pratik2901/multiclass-weather-dataset/download>

To classify weather using the Multi class Weather Dataset from Kaggle you can follow these general steps

Load the dataset Use libraries like Pandas or NumPy to load the dataset into memory

Explore the dataset to understand its structure and the available features

Preprocess the data Perform necessary preprocessing steps such as data cleaning handling missing values and feature engineering This may include resizing images if the dataset contains images or encoding categorical variables

Split the data Split the dataset into training and testing sets The training set will be used to train the model and the testing set will be used for evaluating its performance

Build a model Utilize TensorFlow and Keras to define a suitable model architecture for weather classification

The choice of model depends on the type of data you have For image data convolutional neural networks (CNNs) often work well

Train the model Train the model using the training data Use appropriate training techniques like gradient descent and backpropagation to optimize the model's weights

Evaluate the model Evaluate the trained model's performance using the testing data

Calculate metrics such as accuracy precision recall or F1 score to assess how well the model performs

Fine tune the model If the model's performance is not satisfactory you can experiment with different hyperparameters architectures or regularization techniques to improve its performance This process is called model tuning

Make predictions Once you are satisfied with the model's performance you can use it to make predictions on new unseen

data Provide the necessary input e.g. an image or weather features to the trained model and it will predict the corresponding weather class In chapter 3 you will learn how to use TensorFlow Keras Scikit Learn OpenCV Pandas NumPy and other libraries to perform how to recognize flower using Flowers Recognition dataset provided by Kaggle <https://www.kaggle.com/alexmh/flowers-recognition-download> Here are the general steps involved in recognizing flowers

Data Preparation

Download the Flowers Recognition dataset from Kaggle and extract the contents Import the required libraries and define the dataset path and image dimensions

Loading and Preprocessing the Data

Load the images and their corresponding labels from the dataset Resize the images to a specific dimension Perform label encoding on the flower labels and split the data into training and testing sets Normalize the pixel values of the images

Building the Model

Define the architecture of your model using TensorFlow's Keras API You can choose from various neural network architectures such as CNNs ResNet or InceptionNet The model architecture should be designed to handle image inputs and output the predicted flower class

Compiling and Training the Model

Compile the model by specifying the loss function optimizer and evaluation metrics Common choices include categorical cross entropy loss and the Adam optimizer Train the model using the training set and validate it using the testing set Adjust the hyperparameters such as the learning rate and number of epochs to improve performance

Model Evaluation

Evaluate the trained model on the testing set to measure its performance Calculate metrics such as accuracy precision recall and F1 score to assess how well the model is recognizing flower classes

Prediction

Use the trained model to predict the flower class for new images Load and preprocess the new images in a similar way to the training data Pass the preprocessed images through the trained model and obtain the predicted flower class labels

Further Improvements

If the model's performance is not satisfactory consider experimenting with different architectures hyperparameters or techniques such as data augmentation or transfer learning Fine tuning the model or using ensembles of models can also improve accuracy
