Antelopes David P. Mallon,Steven Charles Kingswood,2001 Antelope herds numbering in the tens of thousands formerly occurred across the steppes and semideserts of Eurasia and India but these have nearly all been reduced to fractions of their earlier size antelope populations are now fragmented across the region and during recent decades several species have disappeared altogether Threats include hunting loss of habitat population fragmentation inadequate protected area coverage poorly developed administrative structures under resourcing of conservation programmes and lack of enforcement of existing legislation Rising human population growth and economic development constantly increases pressure on land and natural resources There is a consequent need for integrated rural development and community based conservation projects which have the full participation of local people at the planning and execution stages This publication Part 4 of the Global Antelope Survey covers 37 countries in the region and actions to conserve antelope populations are listed in each country report

Researching Biology and Evolution in the Gulf States Jörg Matthias Determann, 2015-08-25. Officials and religious scholars in the Gulf states have repeatedly banned the teaching of the theory of evolution because of its association with atheism. But Jörg Matthias Determann argues here that despite official prohibition, research on biological evolution has flourished due in large part to the development of academic and professional networks. This book traces these networks through the history of various branches of biology, including botany, conservation research, ornithology, and palaeontology. Typical of rentier societies, some of the scientific networks in this region consist of vertical patron-client relationships. For example, those in power who are interested in wildlife conservation have been known to offer patronage to biologists working on desert ecology. However, just as important are the horizontal links between scientists both within the Gulf region and beyond. Given the strengths and importance of these two forms of professional networks, Determann argues that we should look at the Arab world as an area interconnected with global science and therefore fully integrated into the scientific and technological advances being pioneered worldwide.

Reintroduction Biology John G. Ewen, Doug P. Armstrong, Kevin A. Parker, Philip J. Seddon, 2012-01-30. This book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the IUCN SSC Reintroduction Specialist Group. Using an issue-based framework that purposely avoids a structure based on case studies, the book's central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives. Issues covered include husbandry and intensive management, monitoring, and genetic and health management. Although taxonomically neutral, there is a recognised dominance of bird and mammal studies that reflects the published research in this field. The structure and content are designed for use by people wanting to bridge the research-management gap, such as conservation managers wanting to expand their thinking about reintroduction-related decisions or researchers who seek to make useful applied contributions to reintroduction.

Zoo and Aquarium History Vernon N. Kisling, 2000-09-18. As one of the world's most popular cultural activities, wild animal collections have been attracting visitors for 5,000 years. Under the direction of Vernon N. Kisling, an expert in zoo history, an international team of authors has compiled the first comprehensive global history of animal collections, menageries, zoos, and aquariums.

Zoo and Aquarium **Carnivore Behavior, Ecology, and Evolution** John L. Gittleman, 2019-05-15. Because carnivores are at the top of the food chain, their status is an important indicator of the health of the world ecosystem. They are intensely interesting to zoologists and uniquely intriguing.

to the general public Devoted primarily to terrestrial carnivores this volume focuses on such themes as carnivore reintroduction programs and the ethics of studying carnivores drawing examples from a variety of species The need to evaluate new conceptual ideas and empirical data inspired this volume of Carnivore Behavior Ecology and Evolution a complement to the original book In the eight years since publication of the first volume conservation has emerged as a thematic imperative The study of carnivores has become even more important in raising and resolving crucial biological problems Differential rates of mortality in the giant panda and other endangered carnivores are now known to influence dispersal and life history patterns basic to these species survival Reintroduction efforts of the black footed ferret and the red wolf are establishing essential guidelines for preservation and management of endangered species Studies of the African lion and the dwarf mongoose illustrate the power of new genetic techniques of DNA fingerprinting for understanding the evolution of social behavior
