Behavioural mapping in Sofia

CHALLENGES ADDRESSED

Behavioural mapping is structured observation combining different techniques for documentation, mapping and counting of activities performed by people passing and occupying a defined space in chosen moments of time. It helps to explore the quantity and the quality of various activities performed at the place observed, the non-motorised moving, staying, recreating or playing. The process of gathering of data through observations and data analysis and visualisation can reveal the ways of presence of different targeted groups in the study area and their behaviour. This information can present overall pictures of health, wellbeing, socialisation, time budget and physical activity. The results can provide in-depth knowledge of the users' dynamics at specified locations as input for urban regeneration, decisions, planning and design of healthy conditions and implementation of place oriented NBSs.
