Bonham-Carter, 2014-05-18 Geographic Information Systems for Geoscientists Modelling with GIS provides an introduction to the ideas and practice of GIS to students and professionals from a variety of geoscience backgrounds The emphasis in the book is to show how spatial data from various sources principally paper maps digital images and tabular data from point samples can be captured in a GIS database manipulated and transformed to extract particular features in the data and combined together to produce new derived maps that are useful for decision making and for understanding spatial interrelationship The book begins by defining the meaning purpose and functions of GIS It then illustrates a typical GIS application Subsequent chapters discuss methods for organizing spatial data in a GIS data input and data visualization transformation of spatial data from one data structure to another and the combination analysis and modeling of maps in both raster and vector formats This book is intended as both a textbook for a course on GIS and also for those professional

geoscientists who wish to understand something about the subject Readers with a mathematical bent will get more out of the later chapters but relatively non numerate individuals will understand the general purpose and approach and will be able to apply methods of map modeling to clearly defined problems      **Computer Techniques in Neuroanatomy** J.J.

Capowski,2012-12-06 This book is the story of the marriage of a new technology computers with an old problem the study of neuroanatomical structures using the light microscope It is aimed toward you the neuroanatomist who until now have used computers primarily for word processing but now wish to use them also to collect and analyze your laboratory data After reading the book you will be better equipped to use a computer system for data collection and analysis to employ a programmer who might develop a system for you or to evaluate the systems available in the marketplace To start toward this goal a glossary first presents commonly used terms in computer assisted neuroanatomy This on its own will aid you as it merges the jargon of the two different fields Then Chapter 1 presents a historical review to describe the manual tasks involved in presenting and measuring anatomic structures This review lays a base line of the tasks that were done before computers and the amount of skill and time needed to perform the tasks In Chapters 2 and 3 you will find basic information about laboratory computers and programs to the depth required for you to use the machines easily and talk with some fluency to computer engineers programmers and salesmen Chapters 4 5 and 6 present the use of computers to reconstruct anatomic structures i e to enter them into a computer memory where they are later displayed and analyzed      *Computer Graphics Career Handbook* ,1991      *InfoWorld* ,1984-09-24 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects      **Interfaces** ,1988 Seeks to improve communication between managers and professionals in OR MS      **Learning and Teaching Geometry, K-12** ,1987
