Martinez-Val, 2020-11-25 Nuclear Fusion by Inertial Confinement provides a comprehensive analysis of directly driven inertial confinement fusion All important aspects of the process are covered including scientific considerations that support the concept lasers and particle beams as drivers target fabrication analytical and numerical calculations and materials and engineering considerations Authors from Australia Germany Italy Japan Russia Spain and the U S have contributed to the volume making it an

internationally significant work for all scientists working in the Inertial Confinement Fusion ICF field as well as for graduate students in engineering and physics with interest in ICF *Hypersonic and High Temperature Gas Dynamics* John David Anderson,1989 This book is a self contained text for those students and readers interested in learning hypersonic flow and high temperature gas dynamics It assumes no prior familiarity with either subject on the part of the reader If you have never studied hypersonic and or high temperature gas dynamics before and if you have never worked extensively in the area then this book is for you On the other hand if you have worked and or are working in these areas and you want a cohesive presentation of the fundamentals a development of important theory and techniques a discussion of the salient results with emphasis on the physical aspects and a presentation of modern thinking in these areas then this book is also for you In other words this book is designed for two roles 1 as an effective classroom text that can be used with ease by the instructor and understood with ease by the student and 2 as a viable professional working tool for engineers scientists and managers who have any contact in their jobs with hypersonic and or high temperature flow **Subject Guide to Books in Print** ,1993
