Applications of Artificial Intelligence for Decision-Making Patrick J Talbot, 2015-04-10 Book Description We have the data Too much data Decision making requires that data be filtered and refined to provide information Adding context to the content produces actionable knowledge Unfortunately current techniques strip away the uncertainty associated with the raw data This book provides a decision centered approach for coping with uncertainty that combines what people do best with what computers do best Algorithms plug into the knowledge base from a single import export interface facilitating multi strategy reasoning Triage filters the data extraction of hedge words capture uncertainty an executable knowledge base provides content in context data fusion propagates uncertainty data analytics discover patterns and plan optimization tools move the decision maker from what s going on to what to do Displays present actionable knowledge with associated uncertainties explicitly shown Fifteen applications are shown ranging from longevity prediction to a retail problem solver to intelligence community applications to starship cybernetics We wrote the book to provide the practitioner with compelling ideas for orchestrating artificial intelligence statistical and mathematical algorithms to produce fully integrated decision support systems Novel techniques of particular interest are a knowledge representation that provides a unifying framework for multi strategy reasoning and simulation a robust treatment of uncertainty monitor assess plan execute decision loops for routine and quick reaction decisions eight techniques for automated discovery of unknown unknowns level 4 process refinement data fusion and a self aware knowledge base that knows what it knows Artificial Intelligence and Decision-Making Applications in a Business Context. Chances and Risks ,2020-12-21 Bachelor Thesis from the year 2020 in the subject Business economics Business Management Corporate Governance grade 1 1 University Pontificia Comillas Madrid language English abstract This thesis is concerned with what AI is capable of in decision making when involved in organizational decision making processes or embedded in offered products that perform decisions It is also concerned with what is lost and what is gained through its use and which risks businesses face when applying it It adds value to previous work conducted on challenges and risks by explaining these from a business perspective focusing on the economic implications for organizations The resulting overview on chances and risks can serve organizations interested in AI investments to augment or automate decision making in understanding the risk situation and potentials in this field In the first chapter AI is introduced in a comprehensible way for non computer scientists and its relevance for business is outlined Subsequently decision processes and how humans and AI tackle them are explained which provides a foundation to understand respective strengths and limitations of humans and AI in decision making The third chapter explains how AI can be applied in decision making in businesses processes and products that perform decisions providing benchmark examples Autonomous driving and recruiting are presented as examples for decision automation and decision augmentation respectively on the basis of which benefits and challenges will be explained Focusing on these examples aims at making the

possible associated effects of using AI in decision making processes more tangible and understandable for business professionals

Methods and Applications of Artificial Intelligence Abdelkhalak El Hami, 2025-02-26 Artificial Intelligence AI is currently one of the most talked about technologies both among scientists and in public media Several factors have contributed to its development in recent years The first is access to vast quantities of data such as in the industrial field the advent of Industry 4.0 which promotes automation and data sharing in several technologies Another factor is the continuous improvement in computing power thanks to the development of ever more powerful processors and the optimization of algorithms With these two limitations removed the focus of most AI developments is on the quality of predictions The integration of AI into the industrial domain represents an exciting new frontier for innovation Just as AI has transformed many other sectors its application to mechanical technologies enables significant improvements in design manufacturing and quality control processes from computer aided design CAD to printing parameter optimization defect detection and real time monitoring This type of technology requires computer systems data with management systems and advanced algorithms which can be used by AIs In mechanical engineering AI offers many possibilities in mechanical construction predictive maintenance plant monitoring robotics additive manufacturing materials vibration etc *Methods and Applications of Artificial Intelligence* is dedicated to the methods and applications of AI in mechanical engineering Each chapter clearly sets out the techniques used and developed and accompanies them with illustrative examples The book is aimed at students but is also a valuable resource for practicing engineers and research lecturers

Judicial Applications of Artificial Intelligence Giovanni Sartor, Karl Branting, 1998-12-31 The judiciary is in the early stages of a transformation in which AI Artificial Intelligence technology will help to make the judicial process faster cheaper and more predictable without compromising the integrity of judges discretionary reasoning Judicial decision making is an area of daunting complexity where highly sophisticated legal expertise merges with cognitive and emotional competence How can AI contribute to a process that encompasses such a wide range of knowledge judgment and experience Rather than aiming at the impossible dream or nightmare of building an automatic judge AI research has had two more practical goals producing tools to support judicial activities including programs for intelligent document assembly case retrieval and support for discretionary decision making and developing new analytical tools for understanding and modeling the judicial process such as case based reasoning and formal models of dialectics argumentation and negotiation Judges

squeezed between tightening budgets and increasing demands for justice are desperately trying to maintain the quality of their decision making process while coping with time and resource limitations Flexible AI tools for decision support may promote uniformity and efficiency in judicial practice while supporting rational judicial discretion Similarly AI may promote flexibility efficiency and accuracy in other judicial tasks such as drafting various judicial documents The contributions in this volume exemplify some of the directions that the AI transformation of the judiciary will take **Tenth International**
