adequately descriptive for those unfamiliar with the various processes and yet is sufficiently analytical for an introductory academic course in manufacturing. The text as well as the numerous formulas and illustrations in each chapter clearly show that shaping processes as a part of manufacturing engineering are a complex and interdisciplinary subject. The topics are organized and presented in such a manner that they motivate and challenge students to present technically and economically viable solutions to a wide variety of questions and problems including product design. It is the perfect textbook for students in mechanical, industrial, and manufacturing engineering programs at both the Associate Degree and Bachelor Degree programs as well as a valuable reference for manufacturing engineers, those who design, execute, and maintain the equipment and tools, process engineers, those who plan and engineer the manufacturing steps, equipment and tooling needed in production, manufacturing managers and supervisors, product design engineers, and maintenance and reliability managers and technicians.

Features: Each chapter begins with a brief highlighted outline of the topics to be described. Carefully presents the fundamentals of the particular metal shaping process with its relevant applications within each chapter so that the student and teacher can clearly assess the capabilities, limitation, and potentials of the process and its competitive aspects. Features sections on product design considerations which present guidelines on design for manufacturing in many of the chapters. Offers practical, understandable explanations even for complex processes. Includes text entries that are coded as in an outline with these numerical designations carried over the 320 related illustrations for easy cross referencing. Provides a dual ISO and USA unit system.
