The Tight Junction and Its Proteins: More Than Just a Barrier Michael Fromm, Susanne M. Krug, 2020-11-20 For a long time the tight junction TJ was known to form and regulate the paracellular barrier between epithelia and endothelial cell sheets Starting shortly after the discovery of the proteins forming the TJ mainly the two families of claudins and TAMPs several other functions have been discovered a striking one being the surprising finding that some claudins form paracellular channels for small ions and or water This Special Issue includes 43 articles covering numerous dedicated topics including pathogens affecting the TJ barrier TJ regulation via immune cells the TJ as a therapeutic target TJ and cell polarity function and regulation by proteins of the tricellular TJ TJ as a regulator of cellular processes organ and tissue specific functions TJ as sensors and reacting to environmental conditions and last but not least TJ proteins and cancer *Cumulated Index Medicus*, 2000 Industrial Distribution, 1983 Bioinorganic Chemistry of Nickel Michael J. Maroney, Stefano Ciurli, 2020-06-16 The chemistry of nickel in biological systems has been intensely investigated since the discovery of the essential role played by this transition metal in the enzyme urease ca 1975 Since then several nickel dependent enzymes have been discovered and characterized at the molecular level using structural spectroscopic and kinetic methods and insight into reaction mechanisms has been elaborated using synthetic and computational models The dual role of nickel as both an essential nutrient and as a toxin has prompted efforts to understand the molecular mechanisms of nickel toxicology and to uncover the means by which cells select nickel from among a pool of different and more readily available metal ions and thus regulate the intracellular chemistry of nickel This latter effort highlights the importance of proteins involved in the extra and intra cellular sensing of nickel the roles of nickel selective proteins for import and export and nickel responsive transcription factors all of which are important for regulating nickel homeostasis In this Special Issue the contributing authors have covered recent advances in many of these aspects of nickel biochemistry including toxicology bacterial pathogenesis carcinogenesis computational and synthetic models nickel trafficking proteins and enzymology *Lassa Fever* Hinh Ly, 2020-12-29 Lassa virus causes Lassa fever disease in several countries in West Africa where it is estimated to infect up to half million people causing roughly five thousand deaths each year This deadly virus has also been introduced in multiple occasions into the western world including the United States United Kingdom Netherlands Sweden and Germany Lassa virus infection which is often misdiagnosed can lead to a wide range of disease symptoms ranging from mild flu like symptoms to bleeding disorders multi organ failure and death Despite some major discoveries made in recent years of research on Lassa fever there are still many unresolved key issues that hamper the development of effective vaccines and therapies Some of these issues include a detailed understanding of the viral and participating host factors in completing the virus life cycle in mediating disease pathogenesis or protection and in activating or suppressing host immune responses against virus infection This book is devoted to understanding some of these important issues Expert and timely contributions in the form of editorial and original

research and review articles on Lassa fever viral replication disease pathogenesis and protection host immune modulations and other related hot topics are presented in this publication Index Medicus ,2001 **Standard Directory of Advertisers** ,1991 **Kidney Inflammation, Injury and Regeneration** Patrick C. Baer,Benjamin Koch,Helmut Geiger,2020-04-03 Acute kidney injury AKI is still associated with high morbidity and mortality incidence rates and also bears an elevated risk of subsequent chronic kidney disease Although the kidney has a remarkable capacity for regeneration after injury and may recover completely depending on the type of renal lesions the options for clinical intervention are restricted to fluid management and extracorporeal kidney support The development of novel therapies to prevent AKI to improve renal regeneration capacity after AKI and to preserve renal function is urgently needed The Special Issue covers research articles that investigated the molecular mechanisms of inflammation and injury during different renal pathologies renal regeneration diagnostics using new biomarkers and the effects of different stimuli like medication or bacterial components on isolated renal cells or in vivo models The Special Issue contains important reviews that consider the current knowledge of cell death and regeneration inflammation and the molecular mechanisms of kidney diseases In addition the potential of cell based therapy approaches that use mesenchymal stromal stem cells or their derivatives is summarized This edition is complemented by reviews that deal with the current data situation on other specific topics like diabetes and diabetic nephropathy or new therapeutic targets Marketing Information Guide ,1968 *American Machinist* ,1923
