Building Ecology First Principles For A Sustainable Built Environment:

Building Ecology Peter Graham, 2009-02-12 Buildings consume 40% of our planet's materials and 30% of its energy. Their construction uses up to three million tonnes of raw materials a year and generates 20% of the solid waste stream. If we want to survive our urban future, there is no option but to build in ways which improve the health of ecosystems. Understanding the concept of ecological sustainability and translating it into practice as sustainable development is a key challenge for today's built environment professionals. The skill and vision of those who shape our cities and homes is vital to achieving sustainable solutions to the many environmental, economic and social problems we face on a local, national and global scale. Peter Graham offers here a holistic view of ecologically sustainable building by drawing on established areas of knowledge, demonstrating their relevance to the environmentally conscious building professional and putting the process, product and impact of building into context. Case studies illustrate how sustainable principles have been applied successfully and discussion topics are offered to stimulate thought. Building Ecology will help planners, surveyors, designers and builders to incorporate sustainability into their everyday practice by showing which styles of building are ecologically sustainable, providing fundamental knowledge for making decisions using the principles of ecologically sustainable building, explaining a complex subject in a clear, balanced way. Building Ecology sets out the current scientific view of how nature works and how buildings link with and affect nature. It provides fundamental knowledge for building in harmony with nature and keeping Earth's life-supporting ecosystems healthy. *The Sustainable Built Environment* Begum Sertyesilisik, Ahmed Al Shamma'a, 2015-11-27 The text adopts an interdisciplinary approach to address the huge challenges in creating a sustainable built environment. In a broad survey of critical issues, it assesses procurement, cost modelling and management of sustainable buildings, low and zero carbon technologies, sustainability in utilities and the law. , **Organisational Ethics in the Built Environment** Jason Challender, 2023-09-06 Organisational Ethics in the Built Environment: A comprehensive analysis of the critical role played by ethics in construction organisations and a toolkit for implementing a strong ethical culture. In *Organisational Ethics in the Built Environment*, accomplished construction leader Jason Challender delivers an insightful and important resource for construction industry professionals contributing to the creation of safe and suitable projects. The author explains how to construct the foundation for ethical building and business practices in the construction industry and explores the methods, motives and rationales behind successful and ethical projects from an organisational and industry perspective. You'll learn how practical improvements to organisational ethics can promote ethical standards, behaviours and practices and influence the success of projects in the built environment. You'll also discover the importance of leadership, motivational management, human resource management, corporate responsibility and social value in encouraging strict compliance and adherence to ethical principles, values and standards within organisations. Readers will also find a thorough introduction to the critical importance of trust, collaborative working and partnering arrangements in contemporary

construction and engineering organisations Comprehensive explorations of the relevance of environmental ethics Practical discussions of how to link corporate policies and strategies to ethical guidelines Case studies from across a variety of knowledge fields including manufacturing and retail Perfect for construction managers Organisational Ethics in the Built Environment will also benefit undergraduate and postgraduate students of construction business management engineering and other construction related subjects

Materials for a Healthy, Ecological and Sustainable Built Environment Emina K. Petrović, Brenda Vale, Maibritt Pedersen Zari, 2017-03-23 Principles for Evaluating Building Materials in Sustainable Construction Healthy and Sustainable Materials for the Built Environment provides a comprehensive overview of the issues associated with the selection of materials for sustainable construction proposing a holistic and integrated approach The book evaluates the issues involved in choosing materials from an ecosystem services perspective from the design stage to the impact of materials on the health of building users The three main sections of the book discuss building materials in relation to ecosystem services the implications of materials choice at the design stage and the impact of materials on building users and their health The final section focuses on specific case studies that illustrate the richness of solutions that existed before the rise of contemporary construction and that are consistent with a sustainable approach to creating built environments These are followed by modern examples which apply some if not all of the principles discussed in the first three sections of the book Provides a holistic and integrated approach to the issues associated with the selection of materials for sustainable construction Provides a thorough understanding of ecosystem services based on ecology research for built environment design Provides an original review of the impact of materials on human health Provides case studies to illustrate the points above

The Elements of Architecture Scott Drake, 2014-02-04 The Elements of Architecture is a clear and well structured introduction to sustainable architecture which concentrates on general principles to make an accessible and comprehensive primer for undergraduate students The author takes a fresh and logical approach focusing on the way aspects of the built environment are experienced by the occupants and how that experience is interpreted in architectural design He works through basic elements and senses sun heat light sound air water and fire to explain and frame effective environmental architectural design not only arguing that the buildings we inhabit should be viewed as extensions of our bodies that interact with and protect us from these elements but also using this analogy to explain complex ideas in an accessible manner
