Biomarkers in Autoimmune Diseases of the Central Nervous System Mei-Ping Ding, Long-Jun Wu, Shougang Guo, Honghao Wang, Yin-Xi Zhang, 2023-09-25 Autoimmune diseases of the central nervous system CNS are a group of complex and disabling disorders characterized by the immune system mistakenly attacking the CNS During the last 2 decades we have witnessed a rapidly evolving spectrum of CNS autoimmune diseases which has become a research hotspot in neurology These include CNS inflammatory demyelinating diseases such as multiple sclerosis and neuromyelitis optical spectrum disorders paraneoplastic

and other autoimmune encephalomyelitis and CNS involvement in systemic autoimmune diseases Recently although remarkable discoveries have accumulated more understanding of the autoimmune basis behind the physiopathologic mechanism the exact pathogenic processes are still unclear Patients may present with a variety of manifestations posing a great challenge to diagnosis and management The determination of biomarkers plays a significant role in CNS autoimmune diseases Biomarkers can reflect the presence nature and intensity of certain immune responses triggered by both genetic and environmental processes and bear great importance in guiding clinical diagnosis estimating disease risk or prognosis evaluating disease severity and monitoring progression or response to therapy For instance the detection of disease specific antibodies can contribute to the accurate diagnosis and precise treatment Moreover identifying the diverse biomarkers could further help to achieve the ultimate goal of personalized medicine

Clinical Neurology E-Book Peter Gates,2010-07-15 This is a clinical neurology book for the student non neurologist and those that teach them The book covers neuroanatomy history taking and examination and then proceeds to discuss the clinical features of common problems as well as some of the more common rare neurological disorders in a way that will demystify a part of medicine that students find complex and difficult to understand The book is accompanied by a DVD explaining concepts demonstrating techniques of performing the neurological examination and demonstration of abnormal neurological signs The first chapter is devoted to neuroanatomy from a clinical viewpoint The concept of localising problems by likening the nervous system to a map grid with vertical meridians of longitude the ascending sensory pathways and the descending motor pathway and horizontal parallels of latitude cortical signs brainstem cranial nerves nerve roots and peripheral nerves of the nervous system is developed Subsequent chapters take the reader through the neurological examination and the common neurological presentations from a symptom oriented approach Chapter 4 contains a very simple method of understanding the brainstem the rule of 4 Chapter 6 discusses the approach after the history and examination are completed The final chapter is an overview of how to approach information gathering and keeping up to date using the complex information streams available widely illustrated with case studies and illustrations key points clinical questions clinical orientation with comprehensive references
