**New Trends in the Applications of Differential Equations in Sciences** Angela Slavova, 2024-06-15 This book convenes peer reviewed selected papers presented at the Tenth International Conference New Trends in the Applications of Differential Equations in Sciences NTADES held in Saints Constantine and Helena Bulgaria July 17 20 2023 Contributions are devoted to many applications of differential equations in different fields of science A number of phenomena in nature physics chemistry biology and in society economics result in problems leading to the study of linear and nonlinear differential equations stochastic equations statistics analysis numerical analysis optimization and more The main topics are presented in the five parts of the book applications in mathematical physics mathematical biology financial mathematics neuroscience and fractional analysis In this volume the reader will find a wide range of problems concerning recent achievements in both theoretical and applied mathematics The main goal is to promote the exchange of new ideas and research between scientists who develop and study differential equations and researchers who apply them to solve real life problems The book promotes basic research in mathematics leading to new methods and techniques useful for applications of differential equations

**Differential Equations and Their Applications** M. Braun, 2012-12-06 This textbook is a unique blend of the theory of differential equations and their exciting application to real world problems First and foremost it is a rigorous study of ordinary differential equations and can be fully understood by anyone who has completed one year of calculus However in addition to the traditional applications it also contains many exciting real life problems These applications are completely self

contained First the problem to be solved is outlined clearly and one or more differential equations are derived as a model for this problem These equations are then solved and the results are compared with real world data The following applications are covered in this text I In Section 1 3 we prove that the beautiful painting Disciples at Emmaus which was bought by the Rembrandt Society of Belgium for 170 000 was a modern forgery 2 In Section 1 5 we derive differential equations which govern the population growth of various species and compare the results predicted by our models with the known values of the populations 3 In Section 1 6 we try to determine whether tightly sealed drums filled with concentrated waste material will crack upon impact with the ocean floor In this section we also describe several tricks for obtaining information about solutions of a differential equation that cannot be solved explicitly

**Real-life Applications with Membrane Computing**  
Gexiang Zhang, Mario J. Pérez-Jiménez, Marian Gheorghe, 2017-04-05 This book thoroughly investigates the underlying theoretical basis of membrane computing models and reveals their latest applications In addition to date there have been no illustrative case studies or complex real life applications that capitalize on the full potential of the sophisticated membrane systems computational apparatus gaps that this book remedies By studying various complex applications including engineering optimization power systems fault diagnosis mobile robot controller design and complex biological systems involving data modeling and process interactions the book also extends the capabilities of membrane systems models with features such as formal verification techniques evolutionary approaches and fuzzy reasoning methods As such the book offers a comprehensive and up to date guide for all researchers PhDs and undergraduate students in the fields of computer science engineering and the bio sciences who are interested in the applications of natural computing models
