Trucksess, Albert E. Pohland, 2008-02-05 Mycotoxins produced by molds are common contaminants of many important crops including wheat corn rice and peanuts Some mycotoxins are found in fruits and vegetables These contaminants have a broad range of toxic effects including carcinogenicity neurotoxicity and reproductive and developmental toxicity The occurrence of mycotoxins in foods is an unavoidable worldwide problem About 80 countries have imposed regulatory limits to minimize human and animal exposure to mycotoxins Regulatory limits including international standards have tremendous economic impact and must be developed using science based risk assessments The purpose of Mycotoxin Protocols is to provide the scientific and technological basis for analytical methods for use in obtaining the exposure data needed for risk assessments Mycotoxin Protocols is divided into four sections which are interconnected The first section Chapters 1 5 describe the general techniques for mycotoxin analysis with emphasis on the importance of method validation based on statistical parameters sampling procedures for collecting a sample as representative as possible of a bulk lot the isolation of mycotoxins for use as analytical standards or for toxicological studies the evaluation of purity and preparation of standards and the detection and identification of impurities in isolated mycotoxins Sections 2 4 Chapters 6 19 describe the most current chromatographic and immunochemical methods for studies on the major mycotoxins *Principles and Practices of Method Validation* A Fajgelj, A Ambrus, 2007-10-31 Principles and Practices of Method Validation is an overview of the most recent approaches used for method validation in cases when a large number of analytes are determined from a single aliquot and where a large number of samples are to be analysed Much of the content relates to the validation of new methods for pesticide residue analysis in foodstuffs and water

but the principles can be applied to other similar fields of analysis Different chromatographic methods are discussed including estimation of various effects eg matrix induced effects and the influence of the equipment set up The methods used for routine purposes and the validation of analytical data in the research and development environment are documented The legislation covering the EU Guidance on residue analytical methods an extensive review of the existing in house method validation documentation and guidelines for single laboratory validation of analytical methods for trace level concentrations of organic chemicals are also included With contributions from experts in the field any practising analyst dealing with method validation will find the examples presented in this book a useful source of technical information
