Apoptosis The Molecular Biology Of Programmed Cell Death Frontiers In Molecular Biology:

Apoptosis: the Molecular Biology of Programmed Cell Death Mike Jacobson, Nicola McCarthy, 2002 **Apoptosis** Michael D. Jacobson, Nicola J. McCarthy, 2002 The number of cells within the human body is very tightly regulated too many and we can develop cancer too few and we may lose cells that we cannot replace The number of cells is controlled by several different mechanisms in different tissues but all are triggered to commit suicide should too many be in one place at one time or become damaged This book examines how this process of cell suicide apoptosis is regulated and how our understanding of this process may lead to novel treatments for a wide variety of human diseases *10 years of Frontiers in Cell and Developmental Biology: Past Discoveries, Current Challenges and Future Perspectives* Amanda Gay Fisher, 2025-08-18 In 2023 Frontiers in Cell and Developmental Biology celebrated its 10th anniversary marking a decade of publishing cutting edge interdisciplinary research focused on the fundamental biological processes of life This collection serves not only as a commemoration of the journal s 10th anniversary but also as a reflective medium on the state of the broad cell and developmental biology field since the journal s launch Our Chief Editors along with selected members of the editorial board will offer their visions for the future fostering a platform for discussion on both current and anticipated challenges Launched in 2013 Frontiers in Cell and Developmental Biology has grown to encompass 16 specialties reflecting the broad diversity of research being conducted across the field Each section is led by dedicated Specialty Chief Editors and supported by our esteemed Editorial Board of leading experts Frontiers appreciates this opportunity to extend heartfelt gratitude and congratulations to our Editors both past and present for their invaluable contribution towards realizing the vision of Open Science and establishing the Journal s reputation It is a legacy that we are excited to build upon as we step into the next decade of scientific discovery and dissemination Please note All contributing authors are current Chief Editors or nominated Editorial Board members of the Journal Contributions to the collection are by invitation only **Programmed Cell Death and Cardiovascular Disease** Zhi Qi, Rongxue Wu, Xiongwen Chen, Zhiqiang Lin, 2022-09-12 Frontiers in neutron capture therapy M. Frederick Hawthorne, Kenneth Shelly, Richard J. Wiersema, 2001 Frontiers in Neutron Capture Therapy contains current research results originally presented at the Eighth International Symposium on Neutron Capture Therapy for Cancer in La Jolla CA This comprehensive collection of peer reviewed manuscripts is showcased in two volumes covering all aspects of the development of this multidisciplinary approach to cancer therapy Volume I of this work includes clinical results and current progress in treatment planning neutron sources and dosimetry while Volume II presents the synthesis pharmacology and tissue targeting design of boron compounds including work on preclinical dosimetry and radiobiology Intended for researchers and clinicians involved with or interested in new modes of cancer therapy this volume will also serve as a useful guideline for scientists students and practitioners in the field Frontiers in Natural Product Chemistry: Volume 5 Atta-ur-Rahman, 2019-11-22 Frontiers in Natural Product Chemistry is a book series devoted to publishing monographs that

highlight important advances in natural product chemistry The series covers all aspects of research in the chemistry and biochemistry of naturally occurring compounds including research on natural substances derived from plants microbes and animals Reviews of structure elucidation biological activity organic and experimental synthesis of natural products as well as developments of new methods are also included in the series The sixth volume of the series brings seven reviews covering these topics Inhibition of monoamine oxidase MAO via green tea extracts Sesquiterpene lactone cynaropicrin as novel inhibitor of Bcr Abl fusion oncogene expression Effects of dietary polyphenols on chronic diseases Overview of past and present developments towards biotechnological and molecular approaches to improve taxol production Cytotoxicity through molecular targets involved in apoptosis Health related enzyme inhibiting natural products from medicinal plants

Regulation and Dysfunction of Apoptosis Yusuf Tutar, 2022-04-06 The book provides a comprehensive review of apoptotic cell death It discusses the mechanism of apoptosis and emerging principles of drug resistance in cancer The development of novel drug targets and drug delivery systems for inhibiting or inducing apoptosis are the ultimate goal Further upregulation of anti apoptotic proteins and loss of pro apoptotic proteins strongly favors apoptosis evasion The ability of cancer cells to evade apoptosis is critical for the progression and clonal expansion of malignantly transformed cells Defective apoptosis imparts proliferative advantage to cancer cells or cells with the potential to become cancerous The mechanisms employed by cancer cells to evade apoptosis can be used in the strategic design of therapeutic regimens aimed at exploiting apoptotic signaling networks to ensure tumor specific cell death This book presents knowledge of the molecular mechanisms of defective apoptosis that could be translated into the development of novel therapeutic agents and therapeutic modalities for cancer treatment
