Taxonomy of Metacognition Pina Tarricone, 2011-02-28 Metacognition is a complex construct which is fundamental to learning Its complex fuzzy and multifaceted nature has often led to its colloquial application in research resulting in studies that fail to identify its theoretical foundation or elements In response to this the research community continues to call for a comprehensive understanding of the construct of metacognition This book is a response to this call for clarity Pina Tarricone provides a theoretical study of the construct of metacognition in terms of psychological theory The first part of the book analyses the relationship between reflection and metacognition and the second part goes on to analyse the construct of metamemory as the foundation of metacognition The third and final part of the book analyses the construct of metacognition to present the final conceptual framework of metacognition and the taxonomy of metacognition This framework builds a picture and a nexus of the construct through visual links to the related concepts that contribute to what is known as metacognition The Taxonomy of Metacognition provides a comprehensive representation and categorisation of all of the terms concepts categories supercategories subcategories and elements of metacognition It clarifies the construct so that researchers and teachers can develop a better understanding of it This important and broad ranging contribution can be applied to many related areas by researchers psychologists teachers and any profession interested in psychological learning processes Meta-cognition Michael F. Shaughnessy, Marcel Veenman, Cynthia Kleyn Kennedy, 2008 Over the past two

One of the Best Books of 2011 from the Center for Optimal Adult Development. The fields of adult development and the study of learning have traditionally been considered separate, with development falling under psychology and learning under education. However, recent ideas, research, and practices that have emerged in these fields of study effectively emphasize the inherent reciprocal relationship that exists between them. Advances in development frequently lead to learning, and conversely, learning almost necessarily fuels development. In this second edition of *The Oxford Handbook of Reciprocal Adult Learning and Development*, the synchronicity between development and learning is explored further as expert authors advance the latest theories to provide a rich foundation for this new area of study and practice for this interrelated field of study. At the border of two disciplines, this handbook focuses on the capacities of intelligence, meta-cognition, insight, self-efficacy, spirituality, interpersonal competence, wisdom, and other key adult attributes as they relate to positive changes and personal growth in adults. Contexts for development and learning, e.g., the work role and environment, are also addressed and mixed in throughout the volume, are emanating implications for research, practice, and policy. What emerges is a thoughtful handbook for all who promote optimal aging and is a must-read for academics, psychologists, and practitioners in adult development. **Metacognition: Fundamentals, Applications, and Trends** Alejandro Peña-Ayala, 2014-10-30.
