Bodies in Technology ,2002 Chaos Media Stephen Kennedy,2016-07-28 The contemporary media landscape might be described in simple terms as a digital terrain where real and virtual worlds collide Stephen Kennedy investigates the concept of our digital space leading up to the digital turn of the 1990s to fully understand how our perceptions of orientation in space in time was altered Chaos Media A Sonic Economy of Digital Space re thinks the five fundamental paths to our contemporary understanding of the digital age cultural political economic scientific and aesthetic and ties them together to form a coherent whole in order to demonstrate how critical thinking can be reconfigured using a methodological approach that uses chaos and complexity as systematic tools for studying contemporary mediated space Kennedy introduces the concept of Sonic Economy a methodology that allows for a critical engagement with the heterogeneous elements of an information society wherein the dispersion of discrete elements is manifest but not always clearly visible The Switch Jason Puskar,2023-11-21 From the telegraph to the touchscreen how the development of binary switching transformed everyday life and changed the shape of human agency The Switch traces the sudden rise of a technology that has transformed everyday life for billions of people the binary switch By chronicling the rapid growth of binary switching since the mid nineteenth century Jason Puskar contends that there is no human activity as common today as pushing a button or flipping a switch the deceptively simple act of turning something on or off More than a technical history The Switch offers a cultural and political analysis of how reducing so much human action to binary alternatives has profoundly reshaped modern society Analyzing this history Puskar charts the rapid shift from analog to digital across a range of devices keyboards cameras guns light switches computers game controls even the nuclear button to understand how nineteenth century techniques continue to influence today s pervasive digital technologies In contexts that include musical performance finger counting machine writing voting methods and immersive play Puskar shows how the switch to switching led to radically new forms of action and thought The innovative analysis in The Switch makes clear that binary inputs have altered human agency by making choice instantaneous effort minimal and effects more far reaching than ever In the process it concludes switching also fosters forms of individualism that though empowering for many also preserve a legacy of inequality and even domination *Postphenomenology* Evan Selinger,2012-02-01 Postphenomenology is the first book devoted exclusively to the interpretation and advancement of prominent phenomenologist Don Ihde s landmark contributions to history philosophy sociology science sound studies and technology studies Ihde has made a direct and lasting impact on the study of technological experience across the disciplines and acquired an international following of diverse scholars along the way many of whom contribute to Postphenomenology including Albert Borgmann who characterizes Ihde as being among the most interesting and provocative contemporary American philosophers The contributors situate assess and apply Ihde s philosophy with respect to the primary themes that his oeuvre emphasizes They not only clarify Ihde s work but also make

significant contributions to the philosophy of technology phenomenology hermeneutics and the philosophy of science A comprehensive response from Ihde concludes the volume

Networked Learning Christopher Jones, 2015-05-18 This book posits the idea that networked learning is the one new paradigm in learning theory that has resulted from the introduction of digital and networked technologies It sets out in a single volume a critical review of the main ideas and then articulates the case for adopting a networked learning perspective in a variety of educational settings This book fills a gap in the literature on networked learning Although there are several edited volumes in the field there is no other monograph makes the academic case and provides the academic context for networked learning This volume accomplishes three main goals First it assists researchers and practitioners in acquainting themselves with the field Second it provides resources for reference and guidance to those not well acquainted with the field Finally and most powerfully it also allows for the consolidation of a field that is truly multidisciplinary in a way that maintains coherence and consistency

Ethics, Law and the Politics of Information Massimo Durante, 2017-08-03 This book provides a detailed discussion of the theoretical and practical implications of the change driven by ICTs Such a change is often much more profound than an emphasis on information technology and society can capture for not only does it bring about ethical and policy vacuums that call for a new understanding of ethics politics and law but it also re ontologizes reality as propounded by Luciano Floridi s philosophy and ethics of information The informational turn is transforming our understanding of reality by challenging the conventional ways we have of thinking about our world and our identities in terms of stable and enduring structures and beliefs The information age we inhabit brings to completion our self understanding as informational systems that produce process and exchange information with other informational systems in an environment that is itself made up of information The present volume provides us with a better understanding of the normative nature and role of information helping us to grasp the sense and extent to which informational resources serve as constraining affordances guiding our behaviours It does so by delineating the background against which we build our beliefs about reality make decisions and behave through our interactions with a multi agent system that is increasingly dependent on ICTs The book will be of interest to a vast audience ranging from information technologists ethicists policy makers social and legal scholars and all those willing to embrace the following three tenets we construct our world and ourselves informationally by constructing our world and ourselves we thereby become aware of our limits it is precisely these limits that make us become human beings
