

NetBoot

Start up multiple Mac systems from a server-based image.

Features

Standardized desktop configurations

- Configure multiple clients with the same operating system and applications¹
- Define customized configurations for multiple workgroups, floating up to 25 disk images per server
- Replicate server configurations for deployment in compute farms and data centers
- Boot client systems "disklessly" with no reliance on the local hard drive

Simplified client administration

- Deploy new systems instantly with automatic discovery of NetBoot images
- Update an entire workgroup by updating a single disk image
- Modify startup disk images from the Finder
- Restore compromised systems instantly
- Deploy network-based diagnostic and repair utilities

Integration with enterprise infrastructure

- Host startup disk images on Mac OS X Server or other enterprise NFS, or HTTP servers
- Deploy disk images across multiple subnets
- Deploy redundant NetBoot images on multiple servers for maximum availability and performance

The NetBoot service in Mac OS X Server makes managing a group of computers as easy as managing a single Mac. By enabling client systems to boot from a single server-based disk image, instead of from their internal hard drive, you can create a standard configuration and use it on all of the desktop systems in a department or classroom—or host multiple images customized for different workgroups. You can even create server configurations and run all of your servers from one image. Updating the disk image on the NetBoot server updates all of these systems automatically the next time they are restarted.

Every time you restart a NetBoot-enabled computer, it is automatically restored to its original state. The system reads the startup disk image from the server, and all software and system settings return to the configuration in the NetBoot image. This enables you to deploy new systems or repurpose existing ones with unprecedented efficiency. It also means you can quickly recover from user alteration, tampering, and network-borne viruses, providing added protection for your network. At the same time, NetBoot improves usability by giving users a consistent computing experience across Mac systems anywhere on the network.
