existing design procedures and state of the art information from recent research It also summarizes existing blast resistant design approaches and describes the dynamic responses of structural systems to blasts shocks and impacts Additional coverage includes the behavior of specific structural connections the traditional concept of P I diagrams and progressive collapse The book concludes with a systematic and balanced protective design approach Tackling the analytical design assessment and hazard mitigation issues associated with short duration dynamic loads this book examines how impulsive loads affect various types of buildings and facilities It provides the necessary material to help ensure the safety of persons assets and projects

Buildings and Structures under Extreme Loads Chiara Bedon, Flavio Stochino, Daniel Honfi, 2020-11-25 Exceptional loads on buildings and structures may have different causes including high strain dynamic effects due to natural hazards man made attacks and accidents as well as extreme operational conditions severe temperature variations humidity etc All of these aspects can be critical for specific structural typologies and or materials that are particularly sensitive to external conditions In this regard dedicated and refined methods are required for their design analysis and maintenance under the expected lifetime There are major challenges related to the structural typology and material properties with respect to the key features of the imposed design load Further issues can be derived from the need for risk mitigation or retrofit of existing structures as well as from the optimal and safe design of innovative materials systems Finally in some cases no appropriate design recommendations are available and thus experimental investigations can have a key role within the overall process In this Special Issue original research studies review papers and experimental and or numerical investigations are presented for the structural performance assessment of buildings and structures under various extreme conditions that are of interest for design
