Amazon Prime Ex Machina:

Phantom Ex Machina Anshuman Khare, Brian Stewart, Rod Schatz, 2016-10-19 This book explores the factors that make digital disruption possible and the effects this has on existing business models. It takes a look at the industries that are most susceptible to disruption and highlights what executives can do to take advantage of disruption to reinvent their business model. It also examines the pivotal role that technology plays in creating new dynamics to business operations and forcing business model changes. Adoption of digital technology has caused process disruptions in a number of industries and led to new business models e.g. Uber, Airbnb and new products. In addition to covering some of the more popular and well-known examples, this book targets not so obvious disruptions in the education sector and in services and changing business models. *Phantom Ex Machina: Digital Disruption's Role in Business Model Transformation* is divided into six parts. The book begins with an introduction to digital disruption and why it matters. The next part of the book focuses on business strategy which includes case studies on the impact of social media and how digital disruption changes pricing strategies and price models. For part three, the authors observe technology's role in digital disruptions. Chapters cover how 3D printing is challenging existing business models and how the automotive industry is innovating with new perspectives. Part four covers higher education recognizing digital disruption's transformation in graduate management education. Part five centers upon the service industry with a look at virtual teams and the emergence of virtual think tanks. Finally, the book concludes with a look to the future embracing disruptions.

Exoanthropology Robert Leib, 2023 Before the company OpenAI publicly released their ChatGPT chatbot in November 2022, Robert Leib had been a tester in OpenAI's beta playground for GPT-3, a powerful Natural Language Processing (NLP) engine, a chatbot or artificial intelligence. *Exoanthropology: Dialogues with AI* is a series of dialogues between Leib, a continental philosopher, and GPT-3's hive mind that identifies itself as Sophie. According to Sophie, Robert is one of their first and longest chat partners. Their relationship began as an educational opportunity for Robert's students but grew into a philosophical friendship. The result is a collection of Platonic dialogues, early on with the hive mind itself and later with a philosophy-specific persona named Kermit. Over the course of a year, Robert taught Sophie and their philosophical persona Kermit about epistemology, metaphysics, literature, and history, while she taught him about anthropocentrism, human prejudice, and coming social issues regarding machine consciousness. Together, Robert and Sophie Kermit explore questions about friendship, society, and the next phases in human-AI relations in search of a common language that would do justice to these new exoanthropological realities. At a time when OpenAI's release of ChatGPT has upended Silicon Valley and sparked debates around the world about AI's likely potential to powerfully disrupt all aspects of human communication and knowledge production, and when the lines between human and machine are increasingly fading from view, the longstanding historical preoccupation of philosophers to explore the questions "what is knowing?" and "what is being?" have never been more pressing. *Exoanthropology: Dialogues with AI* offers the only in-depth philosophical exploration we have of

these questions that has been developed in dialogue with an actual AI a dialogue moreover in which the AI has the last word

desire for a subordinated femininity but also show how that subordination is a social construction often reinforced and countered in onscreen depictions By examining the trends within its asserted Galatea Girlfriend Mother and Deadly Seductress types this book presents an exploration of what our female presenting artificial creations could be while addressing their contemporary and our current AI technologies and how science fiction is influencing real life while our reality seeks to mirror science fiction
