Scientific Computing with MATLAB and Octave Alfio Quarteroni, Fausto Saleri, 2007-06-21 Preface to the First Edition This textbook is an introduction to Scientific Computing We will illustrate several numerical methods for the computer solution of certain classes of mathematical problems that cannot be faced by paper and pencil We will show how to compute the zeros or the integrals of continuous functions solve linear systems approximate functions by polynomials and construct accurate approximations for the solution of differential equations With this aim in Chapter 1 we will illustrate the rules of the game that computers adopt when storing and operating with real and complex numbers vectors and matrices In order to make our presentation concrete and appealing we will adopt the programming environment MATLAB as a faithful companion We will gradually discover its principal commands statements and constructs We will show how to execute all the algorithms that we introduce throughout the book This will enable us to furnish an immediate quantitative assessment of their theoretical properties such as stability accuracy and complexity We will solve several problems that will be raised through exercises and examples often stemming from scientific applications
