Critical Care Study Guide Gerard J. Criner, Gilbert E.

D'Alonzo, 2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found. Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions. Because this knowledge base crosses many different disciplines, introduction to caring for the intensive care patient while exciting may also be intimidating. This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful. The book contains three components: 1 description of the procedural tasks commonly performed for the critically ill patient; 2 explanation of the most common pathophysiologic states encountered; and 3 description of specific disease entities with details of their differential diagnosis, diagnostic strategy and therapeutic plan. This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks. Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy. As an additional study aid, margin notes highlight important teaching points and facilitate easy review of chapter content. To consolidate the principles outlined in each chapter, review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader.

Wild Forests William S. Alverson, Don Waller, Walter Kuhlmann, 2013-03-05 Wild Forests presents a coherent review of the scientific and policy issues surrounding biological diversity in the context of contemporary public forest management. suspected threats to diversity In addition to discussing general ecological principles the authors evaluate specific approaches to forest management that have been proposed to ameliorate diversity losses They present one such policy the Dominant Use Zoning Model incorporating an integrated network of Diversity Maintenance Areas and describe their attempts to persuade the U S Forest Service to adopt such a policy in Wisconsin Drawing on experience in the field in negotiations and in court the authors analyze the ways in which federal agencies are coping with the mandates of conservation biology and suggest reforms that could better address these important issues Throughout they argue that wild or unengineered conditions are those that are most likely to foster a return to the species richness that we once enjoyed *Resources in Education* ,1996
