

1. What is climate change? Support its existence with three facts.

Answer: an overall increase in mean global temperature

(a) The degree of warming of water and air has been high, especially in the tropics.

(b) Ocean surface temperature is increasing. Some scientists also report an increase in deep ocean water warming in higher than phytoplankton live in the deep ocean.

(c) Long distance migration of birds, insects, and plants is changing in response to the change in climate.

2. Transferring some carbon that otherwise would be stored in biomass to the atmosphere is an example of a positive feedback. Define this term.

a. Positive Feedback

They refer to a feedback process in which a change in one variable causes a change in another variable, which then causes a further change in the first variable.

b. Carbon Feedback

Carbon feedback is a feedback process in which a change in one variable causes a change in another variable, which then causes a further change in the first variable. This is a positive feedback process, which means that the change in the first variable causes a further change in the first variable.

c. Feedback Process

Feedback processes are those processes in which a change in one variable causes a change in another variable, which then causes a further change in the first variable.

d. Positive Feedback

Positive feedback is a feedback process in which a change in one variable causes a change in another variable, which then causes a further change in the first variable. This is a positive feedback process, which means that the change in the first variable causes a further change in the first variable.

e. Carbon Feedback

Carbon feedback is a feedback process in which a change in one variable causes a change in another variable, which then causes a further change in the first variable. This is a positive feedback process, which means that the change in the first variable causes a further change in the first variable.
