Architecture By Birds And Insects A Natural Art:

Architecture by Birds and Insects Peggy Macnamara, 2008 Influential American architect Philip Johnson once mused All architecture is shelter all great architecture is the design of space that contains cuddles exalts or stimulates the persons in that space But with just a small swap of a key word Johnson could well have been describing animal nests Birds and insects are nature s premier architects using a dizzying array of talents to build functional homes in which to live reproduce and care for their young Recycling sticks branches grass and mud to construct their shelters they are undoubtedly the originators of green architecture A visual celebration of these natural feats of engineering and ingenuity Architecture by Birds and Insects allows readers a peek inside a wide range of nests offering a rare opportunity to get a sense of the materials and methods used to build them Here we see the kinds of places where nests are built for instance the house wren has been known to occupy cow skulls flower pots tin cans and the pockets of hanging laundry while the uglynest caterpillar prefers rose bushes and cherry trees Inspired by the vast nest collection at the Field Museum which features specimens gathered throughout North and South America Peggy Macnamara s paintings are enhanced by text written by museum curators This narrative provides a foundation in natural history for each painting as well as fascinating anecdotes about the nests and their builders Like so many natural treasures nests are easy to ignore But Macnamara s gorgeous paintings will undoubtedly change that Architecture by Birds and Insects at last gives the tiniest engineers their rightful moment in the spotlight and in so doing increases awareness and encourages the protection of birds insects and their habitats Readers will never look at a Frank Gehry design or a treetop nest the same way again *The Book of Eggs* Mark E. Hauber, 2024-05-31 A fabulous reference book every image in lovely color with sketches of the birds and maps showing territory It s fascinating to leaf through Minneapolis Star Tribune The Book of Eggs introduces readers to eggs from six hundred bird species some endangered or extinct from around the world and housed mostly at Chicago s Field Museum of Natural History Organized by habitat and taxonomy the entries include newly commissioned photographs that reproduce each egg in full color and at actual size as well as distribution maps and drawings and descriptions of the birds and their nests where the eggs are kept warm Birds eggs are some of the most colorful and variable natural products in the wild and each entry is also accompanied by a brief description that includes evolutionary explanations for the wide variety of colors and patterns from camouflage designed to protect against predation to thermoregulatory adaptations to adjustments for the circumstances of a particular habitat or season Throughout the book are fascinating facts to pique the curiosity of binocular toting birdwatchers and budding amateurs alike Female mallards for instance invest more energy to produce larger eggs when faced with the genetic windfall of an attractive mate Some seabirds like the cliff dwelling guillemot have adapted to produce long pointed eggs whose uneven weight distribution prevents them from rolling off rocky ledges into the sea A visually stunning and scientifically engaging guide to six hundred of the most intriguing eggs from the pea sized progeny of the smallest of

hummingbirds to the eggs of the largest living bird the ostrich which can weigh up to five pounds The Book of Eggs offers readers a rare up close look at these remarkable forms of animal life **City Creatures** Gavin Van Horn,Dave Aftandilian,2015-11-03 This anthology explores Chicago s surprisingly diverse wildlife through essays poetry paintings and photographs We usually think of cities as the domain of humans but we are just one of thousands of species that call the urban landscape home While Chicago residents are likely familiar with squirrels pigeons and dogs many would be surprised to learn about the leafhoppers and water bears black crowned night herons and bison beavers and massasauga rattlesnakes that are living alongside them City Creatures introduces readers these and other creatures through a variety of creative contributions Contributors bring a story based approach to this urban safari taking readers on birding expeditions to the Magic Hedge at Montrose Harbor on the North Side canoe trips down the South Fork of the Chicago River better known as Bubbly Creek and insect collecting forays or restoration work days in the suburban forest preserves The book is organized into six sections each highlighting one type of place in which people might encounter animals in the city and suburbs For example schoolyard chickens and warrior wasps populate Backyard Diversity and a chorus of deep freeze frogs awaits in Water Worlds Its powerful combination of insightful narratives numinous poetry and full color art will help readers see the city and the creatures who share it with us in an entirely new light **The Extended Specimen** Michael S.

Webster,2017-07-20 The Extended Specimen highlights the research potential for ornithological specimens and is meant to encourage ornithologists poised to initiate a renaissance in collections based ornithological research Contributors illustrate how collections and specimens are used in novel ways by adopting emerging new technologies and analytical techniques Case studies use museum specimens and emerging and non traditional types of specimens which are developing new methods for making biological collections more accessible and usable for ornithological researchers Published in collaboration with and on behalf of The American Ornithological Society this volume in the highly regarded Studies in Avian Biology series documents the power of ornithological collections to address key research questions of global importance
