Fouad-Tarazi,2012-12-06 Hypertension is the major cause of left ventricular hypertrophy While the electrocardiogram is an extremely insensitive measure of anatomic left ventricular hypertrophy it provides a time tested important marker of an adverse cardiovascular outcome There has been a recent temporal decrease in the incidence of electrocardiographic evidence of LVH even within the hypertensive population no doubt this is the result of large antihypertensive treatment experts Anatomical evidence of left ventricular hypertrophy is best documented pre morbidly using echocardiographic techniques It therefore appears that between 20 and 50 percent of the hypertensive population has left ventricular hypertrophy by echocardiographic techniques The prognostic significance of the echocardiographically determined increase in left ventricular mass is just beginning to be evaluated Early information suggests that there is an increased rate of cardiovascular morbidity in patients with echocardiographic evidence of increased left ventricular mass However this information is only preliminary and as yet only a limited number of events have been reported Far more supporting information will be required before the full impact of echocardiographically detected left ventricular hypertrophy can be determined Nevertheless it must be stated that the electrocardiogram still has the greatest predictive value of cardiovascular morbid and mortal events when the pattern of left ventricular hypertrophy plus repolarization abnormalities are present **Handbook of Targeted Delivery of Imaging Agents** Vladimir P. Torchilin,1995-08-23 This is the first time detailed and updated information on the targeted delivery of imaging agents has been collected into a single handbook This comprehensive volume presents the scientific background together with the latest experimental and clinical data in this fast growing area The Handbook of Targeted Delivery of Imaging Agents meets the requirements of the broadest audience including researchers practitioners and students The basic principles of targeted delivery of imaging are presented and discussed together with various imaging agents and different imaging modalities such as gamma imaging MR imaging and CT PET and SPECT imaging The book consists of eight parts and 39 chapters covering all aspects of targeted drug delivery from the imaging theory and chemistry of imaging agents to their experimental and clinical use for targeted visualization of cancer including ovarian prostate colorectal and thyroid cancer cardiovascular atherosclerosis myocardial infarction and thromboses and neurological diseases infection and inflammation sites A special section discusses the targeted delivery of imaging agents into lymph nodes which are often sites of metastases during different malignant diseases Monoclonal antibody based
