Countries in the Arab Gulf are currently experiencing some of the fastest rates of growth and progress in the world. Transforming Education in the Gulf Region argues that education systems in these countries need to use innovative pedagogies and best practices in teaching and learning to educate all citizens so that they obtain the knowledge and skills to be productive members of society. This book will contribute to the transformation of education in the Gulf countries by suggesting best practices, research outcomes and case studies from experts in the Gulf region. It has become increasingly evident in recent years that Gulf countries need to use emerging learning technologies to cater for the needs of learners and to provide maximum flexibility in learning. There is also a growing practical need to use electronic technologies since learning materials are more widely available in electronic formats than in paper based formats. This book focuses on the role of emerging technologies and innovative pedagogies in transforming education in six Gulf countries in the region: Saudi Arabia, United Arab Emirates, Kuwait, Qatar, Oman and Bahrain. With contributions from experts around the world, the book argues that the time is right for Arab Gulf countries to make the transition to electronic learning and that they need to implement the outcomes of research and adopt best practices to transform and revolutionize education to prepare learners in the Gulf region for the 21st Century. The book should be of interest to academics and students in the areas of higher education, learning technologies, education policy and education reform. It should also be of interest to educators and policymakers in the Gulf region.

The Thinking Student's Guide to College Andrew Roberts, 2010-09-15. Each fall, thousands of eager freshmen descend on college and university campuses expecting the best education imaginable: inspiring classes taught by top ranked professors, academic advisors who will guide them to a prestigious job or graduate school, and an environment where learning flourishes outside the classroom as much as it does in lecture halls. Unfortunately, most of these freshmen soon learn that academic life is not what they imagined. Classes are taught by overworked graduate students and adjuncts rather than seasoned faculty members; undergrads receive minimal attention from advisors or administrators; and potentially valuable campus resources remain outside their grasp. Andrew Roberts' *Thinking Student's Guide to College* helps students take charge of their university experience by providing a blueprint they can follow to achieve their educational goals, whether at public or private schools, large research universities or small liberal arts colleges. An inside look penned by a professor at Northwestern University, this book offers concrete tips on choosing a college, selecting classes, deciding on a major, interacting with faculty, and applying to graduate school. Here, Roberts exposes the secrets of the ivory tower to reveal what motivates professors, where to find loopholes in university bureaucracy, and most importantly, how to get a personalized education. Based on interviews with faculty and cutting edge educational research, *The Thinking Student's Guide to College* is a necessary handbook for students striving to excel academically, creatively, and personally during their undergraduate years.

Transforming Digital Learning and Assessment Peggy L. Maki, Peter Shea, 2023-07-03. Responding to both the trend towards increasing online enrollments as the demand for face to face education declines and to the immediate surge in

remote learning owing to the COVID 19 pandemic this book provides vital guidance to higher education institutions on how to develop faculty capacity to teach online and to leverage the affordances of an ever increasing array of new and emerging learning technologies This book provides higher education leaders with the context they need to position their institutions in the changing online environment and with guidance to build support in a period of transition It is intended for campus leaders and administrators who work with campus teams charged with identifying learning technologies to meet an agreed upon program or institution level educational needs for those coordinating across campus to build consensus on implementing online strategies and for instructional designers faculty developers and assessment directors who assist departments and faculty effectively integrate learning technologies into their courses and programs It will also appeal to faculty who take an active interest in improving online teaching The contributors to this volume describe the potential of artificial intelligence algorithms such as those that fuel learning analytics software that mines LMS data to enable faculty to quickly and efficiently assess individual students progress in real time prompting either individual attention or the need to more generally clarify concepts for the class as whole They describe and provide access to a hybrid professional development MOOC and an associated WIKI that curate information about a wide range of learning software solutions currently available and present case studies that offer guidance on building the buy in and consensus needed to successfully integrate learning technologies into course program and institution level contexts In sum this book provides readers with a comprehensive understanding of the technological capabilities available to them and identifies collaborative processes related to engaging and building institutional support for the changes needed to provide the rapidly growing demand for effective and evidence based online learning

Teaching STEM to First Generation College Students Gail

Horowitz,2019-03-01 Do you ever feel like more and more of your students come to your classroom not knowing how to study or what to do in order to be successful in your class Some students come to college knowing the ropes knowing what it takes to be successful as STEM students But many do not Research shows that students who are the first generation in their family to attend or complete college are likely to arrive at your classroom not knowing what it takes to be successful And data shows that more first generation students are likely to be arriving on your doorstep in the near future What can you do to help these students be successful This book can provide you with some research based methods that are quick easy and effortless These are steps that you can take to help first generation college students succeed without having to change the way you teach Why put in this effort in the first place The payoff is truly worth it First generation college students are frequently low income students and from ethnic groups underrepresented in STEM With a little effort you can enhance the retention of underrepresented groups in your discipline at your institution and play a role in national efforts to enhance diversity in STEM This book provides an excellent description of dealing with immigrant and first generation college STEM students whose socioeconomic backgrounds often hinder them from reaching their full potential The text touches on various aspects of student faculty and mentor interaction that will lead to the exploitation of the student natural talents and provide life changing outcomes Paris Svoronos Ph D Queensborough Community College of CUNY Gail Horowitz s new book Teaching STEM to First Generation College Students is a timely and important resource to improve the success of college students who come from families with little or no experience in the US higher education system First gens are a growing population whose academic success is important to both the institutions they attend and our nation s economy Dr Horowitz an experienced chemistry educator describes in detail the challenges first gens face in historically difficult STEM classes In doing so she is honest but also optimistic First gens encounter difficulty not merely with the technical subject matter they may have been poorly prepared for in high school but also with their own wrong headed beliefs about how to study and where to find help on campus At the same time Horowitz is also highly respectful of the strengths that many first gens bring to college strengths often under the radar of instructors who may only see inexplicable behaviors they attribute to first gens being clueless unmotivated or irresponsible Horowitz provides an excellent review of constructs from psychology about students and teachers beliefs about academic success and failure demonstrating that first gens are too often tripped by self defeating and often incorrect beliefs about their legitimacy as college students and what it takes to pass difficult STEM courses These she explains fuel first gen students fear about revealing their ignorance and illegitimacy as college students With clear eyed and experienced based optimism about techniques that help first gens succeed she then gives excellent specific suggestions for faculty graduate teaching assistants and the students themselves to help first gens learn to do STEM courses and college successfully This is an important and highly recommended book a gift of honesty and hope by an experienced STEM instructor who clearly cares deeply about first gen students and their college experience Dr Louise
