Beyond Oil The View From Hubberts Peak:

Beyond Oil Kenneth S. Deffeyes, 2025-09-23 This book explains both why the decline of our most precious fuel is inevitable and how challenging it will be to cope with what comes next Richard E Smalley University Professor Rice University and 1996 Nobel laureate With world oil production about to peak and inexorably head toward steep decline what fuels are available to meet rising global energy demands That question once thought to address a fairly remote contingency has become ever more urgent as a spate of books has drawn increased public attention to the imminent exhaustion of the economically vital world oil reserves Kenneth S Deffeyes a geologist who was among the first to warn of the coming oil crisis now takes the next logical step and turns his attention to the earth's supply of potential replacement fuels In *Beyond Oil* he traces out their likely production futures with special reference to that of oil utilizing the same analytic tools developed by his former colleague the pioneering petroleum supply authority M King Hubbert The bad news in this book is made bearable by the author's witty conversational writing style If my college econ textbooks had been written this way I might have learned economics Rupert Cutler *The Roanoke Times* **Beyond Oil and Gas** George A. Olah, Alain Goeppert, G. K. Surya Prakash, 2018-07-03 Completely revised and updated the third edition of this bestseller discusses the concept and ongoing development of using methanol and derived dimethyl ether as a transportation fuel energy storage medium and as a chemical raw material to replace fossil fuels The contents have been expanded by 35% with new and up to date coverage on energy storage methanol from biomass and waste products as well as on carbon dioxide capture and recycling Written by the late Nobel laureate George Olah Alain Goeppert and G K Surya Prakash this is an inspiring read for anyone concerned with the major challenge posed by environmental problems including global warming and ocean acidification due to massive increase in fossil fuel use The book provides a comprehensive and sustainable solution to replace fossil fuels in the long run by chemical recycling of carbon dioxide through renewable methanol utilizing alternative energy sources such as solar wind hydro geothermal and nuclear The Methanol Economy is being progressively implemented in many parts of the world

Societies beyond Oil John Urry, 2013-01-10 What would a de carbonised society be like What are the implications of a general de globalisation for our social futures How will our high carbon patterns of life be restructured in a de energized world As global society gradually wakes up to the new reality of peak oil these questions remain unanswered For the last hundred years oil made the world go round and as we move into the century of tough oil this book examines some profound consequences It considers what societies would be like that are powering down what lessons can be learned from the past about de energized societies will there be rationing systems or just the market to allocate scarce energy Can virtual worlds solve energy problems What levels of income and wellbeing would be likely In this groundbreaking book John Urry analyzes how the twentieth century created a kind of mirage of the future that is unsustainable into even the medium term and envisions the future of an oil dependent world facing energy descent Without a large scale plan B how can the energizing of

society possibly be going into reverse The ^AAmerican West at Risk Howard G. Wilshire, Jane E. Nielson, Richard W.
