

The background of the entire image is a vibrant, orange-hued landscape. In the foreground, there are rolling, sandy dunes. In the middle ground, a sleek, dark-colored spaceship with a long, thin tail fin is flying horizontally across the frame. The sky is filled with wispy clouds, and a massive, bright sun or planet dominates the left side of the upper half, casting a strong glow over the scene.

Introduction to Black Hole Physics Valeri P. Frolov, Andrei Zelnikov, 2011-09-23 This book is about black holes one of the most intriguing objects of modern theoretical physics and astrophysics For many years black holes have been considered as interesting solutions of the Theory of General Relativity with a number of amusing mathematical properties Now after the discovery of astrophysical black holes the Einstein gravity has become an important tool for their study This self-contained textbook combines physical mathematical and astrophysical aspects of black hole theory Pedagogically presented it contains standard material on black holes as well as relatively new subjects such as the role of hidden symmetries in black hole physics and black holes in spacetimes with large extra dimensions The book will appeal to students and young scientists interested in the theory of black holes

Differential Geometry and Mathematical Physics John K. Beem, Krishan L. Duggal, American Mathematical Society, Canadian Mathematical Society, 1994 This book contains the proceedings of the Special Session Geometric Methods in Mathematical Physics held at the joint AMS CMS meeting in Vancouver in August 1993 The papers collected here contain a number of new results in differential geometry and its applications to physics The major themes

include black holes singularities censorship the Einstein field equations geodesics index theory submanifolds CR structures and space time symmetries In addition there are papers on Yang Mills fields geometric techniques in control theory and equilibria Containing new results by established researchers in the field this book provides a look at developments in this exciting area of research

Introduction to the AdS/CFT Correspondence Horațiu Năstase, 2015-09-10 Providing a pedagogical introduction to the rapidly developing field of AdS CFT correspondence this is one of the first texts to provide an accessible introduction to all the necessary concepts needed to engage with the methods tools and applications of AdS CFT Without assuming anything beyond an introductory course in quantum field theory it begins by guiding the reader through the basic concepts of field theory and gauge theory general relativity supersymmetry supergravity string theory and conformal field theory before moving on to give a clear and rigorous account of AdS CFT correspondence The final section discusses the more specialised applications including QCD quark gluon plasma and condensed matter This book is self contained and learner focused featuring numerous exercises and examples It is essential reading for both students and researchers across the fields of particle nuclear and condensed matter physics

Gravitation in Astrophysics B. Carter, J.B. Hartle, 2012-12-06 With the discovery of pulsars quasars and galactic X ray sources in the late 60 s and early 70 s and the coincident expansion in the search for gravitational waves relativistic gravity assumed an important place in the astrophysics of localized objects Only by pushing Einstein's solar system tested general theory of relativity to the study of the extremes of gravitational collapse and its outcomes did it seem that one could explain these frontier astronomical phenomena This conclusion continues to be true today Relativistic gravity had always played the central role in cosmology The discovery of the cosmic background radiation in 1965 the increasing understanding of matter physics at high energies in the decades following and the growing wealth of observations on the large scale structure meant that it was possible to make increasingly detailed models of the universe both today and far in the past This development not accidentally was contemporary to that for localized objects described above

Hawking on the Big Bang and Black Holes Stephen W. Hawking, 1993 Stephen

Hawking the Lucasian Professor of Mathematics at Cambridge University has made important theoretical contributions to gravitational theory and has played a major role in the development of cosmology and black hole physics Hawking's early work partly in collaboration with Roger Penrose showed the significance of spacetime singularities for the big bang and black holes His later work has been concerned with a deeper understanding of these two issues The work required extensive use of the two great intellectual achievements of the first half of the Twentieth Century general relativity and quantum mechanics and these are reflected in the reprinted articles Hawking's key contributions on black hole radiation and the no boundary condition on the origin of the universe are included The present compilation of Stephen Hawking's most important work also includes an introduction by him which guides the reader through the major highlights of the volume This volume is thus an essential item in any library and will be an important reference source for those interested in theoretical physics and applied mathematics It is an excellent thing to have so many of Professor Hawking's most important contributions to the theory of black holes and space time singularities all collected together in one handy volume I am very glad to have them Roger Penrose Oxford This was an excellent idea to put the best papers by Stephen Hawking together Even his papers written many years ago remain extremely useful for those who study classical and quantum gravity By watching the evolution of his ideas one can get a very clear picture of the development of quantum cosmology during the last quarter of this century Andrei Linde Stanford This review could have been quite short The book contains a selection of 21 of Stephen Hawking's most significant papers with an overview written by the author This work
