Solutions to Selected Exercises

Alan Agresti

Version August 3, 2012, ©Alan Agresti 2012

This file contains solutions and hints to solutions for some of the exercises in *Categorical Data Analysis*, third edition, by Alan Agresti (John Wiley, & Sons, 2012). The solutions given are partly those that are also available at the website www.stat.ufl.edu/~aa/cda2/cda.html for many of the odd-numbered exercises in the second edition of the book (some of which are now even-numbered). I intend to expand the document with additional solutions, when I have time.

Please report errors in these solutions to the author (Department of Statistics, University of Florida, Gainesville, Florida 32611-8545, e-mail AA@STAT.UFL.EDU), so they can be corrected in future revisions of this site. The author regrets that he cannot provide students with more detailed solutions or with solutions of other exercises not in this file.

Chapter 1

1. a. nominal, b. ordinal, c. interval, d. nominal, e. ordinal, f. nominal.
3. π varies from batch to batch, so the counts come from a mixture of binomials rather than a single $\text{bin}(n, \pi)$. $\text{Var}(Y) = E[\text{Var}(Y \mid \pi)] + \text{Var}[E(Y \mid \pi)] > E[\text{Var}(Y \mid \pi)] = E[n\pi(1 - \pi)]$.
7. a. $\ell(\pi) = \pi^{20}$, so it is not close to quadratic.
 b. $\hat{\pi} = 1.0$. Wald statistic $z = (1.0 - .5) / \sqrt{1.0(0)/20} = \infty$. Wald CI is $1.0 \pm 1.96\sqrt{1.0(0)/20} = 1.0 \pm 0.0$, or $(1.0, 1.0)$. These are not sensible.
 c. $z = (1.0 - .5) / \sqrt{.5(.5)/20} = 4.47$, $P < 0.0001$. Score CI is $(0.839, 1.000)$.
 d. Test statistic $2(20) \log(20/10) = 27.7$, $df = 1$. The CI is $(\exp(-1.96^2/40), 1) = (0.908, 1.0)$.
 e. $P\text{-value} = 2(.5)^{20} = .00000191$.
9. The chi-squared goodness-of-fit test of the null hypothesis that the binomial proportions equal $(0.75, 0.25)$ has expected frequencies $(827.25, 275.75)$, and $X^2 = 3.46$ based on $df = 1$. The P -value is 0.063, giving moderate evidence against the null.
10. The sample mean is 0.61. Fitted probabilities for the truncated distribution are 0.543, 0.332, 0.102, 0.021, 0.003. The estimated expected frequencies are 108.5, 66.4, 20.3, 4.1, and 0.6, and the Pearson $X^2 = 0.7$ with $df = 3$ (0.3 with $df = 2$ if we truncate at 3 and above). The fit seems adequate.
11. With the binomial test the smallest possible P -value, from $y = 0$ or $y = 5$, is

Exercises and Solutions in Biostatistical Theory Lawrence Kupper, Brian Neelon, Sean M. O'Brien, 2010-11-09 Drawn from nearly four decades of Lawrence L. Kupper's teaching experiences as a distinguished professor in the Department of Biostatistics at the University of North Carolina *Exercises and Solutions in Biostatistical Theory* presents theoretical statistical concepts, numerous exercises, and detailed solutions that span topics from basic probability to statistical inference. The text links theoretical biostatistical principles to real world situations including some of the authors' own biostatistical work that has addressed complicated design and analysis issues in the health sciences. This classroom-tested material is arranged sequentially, starting with a chapter on basic probability theory, followed by chapters on univariate distribution theory and multivariate distribution theory. The last two chapters on statistical inference cover estimation theory and hypothesis testing theory. Each chapter begins with an in-depth introduction that summarizes the biostatistical principles needed to help solve the exercises. Exercises range in level of difficulty from fairly basic to more challenging, identified with asterisks. By working through the exercises and detailed solutions in this book, students will develop a deep understanding of the principles of biostatistical theory. The text shows how the biostatistical theory is effectively used to address important biostatistical issues in a variety of real world settings. Mastering the theoretical biostatistical principles described in the book will prepare students for successful study of higher-level statistical theory and will help them become better biostatisticians.

Exercises and Solutions in Statistical Theory Lawrence L. Kupper, Brian H. Neelon, Sean M. O'Brien, 2013-06-24 *Exercises and Solutions in Statistical Theory* helps students and scientists obtain an in-depth understanding of statistical theory by working on and reviewing solutions to interesting and challenging exercises of practical importance. Unlike similar books, this text incorporates many exercises that apply to real world settings and provides much more.
