Beyond Reduction Philosophy Of Mind And Post Reductionist Philosophy Of Science:

Beyond Reduction Steven Horst, 2007-08-30 A positive alternative approach to mind which sees the philosophy of mind like the sciences as cognitive enterprises trying to model local features of the world and ourselves **Beyond Reduction** Steven Horst, 2007-08-30 Contemporary philosophers of mind tend to assume that the world of nature can be reduced to basic physics Yet there are features of the mind consciousness intentionality normativity that do not seem to be reducible to physics or neuroscience This explanatory gap between mind and brain has thus been a major cause of concern in recent philosophy of mind Reductionists hold that despite all appearances the mind can be reduced to the brain Eliminativists hold that it cannot and that this implies that there is something illegitimate about the mentalistic vocabulary Dualists hold that the mental is irreducible and that this implies either a substance or a property dualism Mysterian non reductive physicalists hold that the mind is uniquely irreducible perhaps due to some limitation of our self understanding In this book Steven Horst argues that this whole conversation is based on assumptions left over from an outdated philosophy of science While reductionism was part of the philosophical orthodoxy fifty years ago it has been decisively rejected by philosophers of science over the past thirty years and for good reason True reductions are in fact exceedingly rare in the sciences and the conviction that they were there to be found was an artifact of armchair assumptions of 17th century Rationalists and 20th century Logical Empiricists The explanatory gaps between mind and brain are far from unique In fact in the sciences it is gaps all the way down And if reductions are rare in even the physical sciences there is little reason to expect them in the case of psychology Horst argues that this calls for a complete re thinking of the contemporary problematic in philosophy of mind Reductionism dualism eliminativism and non reductive materialism are each severely compromised by post reductionist philosophy of science and philosophy of mind is in need of a new paradigm Horst suggests that such a paradigm might be found in Cognitive Pluralism the view that human cognitive architecture constrains us to understand the world through a plurality of partial idealized and pragmatically constrained models each employing a particular representational system optimized for its own problem domain Such an architecture can explain the disunities of knowledge and is plausible on evolutionary grounds *Reduction in Philosophy of Mind* Markus I. Eronen, 2013-05-02 The notion of reduction continues to play a key role in philosophy of mind and philosophy of cognitive science Supporters of reductionism claim that psychological properties or explanations reduce to neural properties or explanations while antireductionists claim that such reductions are not possible In this book I apply recent developments in philosophy of science particularly the mechanistic explanation paradigm and the interventionist theory of causation to reassess the traditional approaches to reduction in philosophy of mind I then elaborate and defend a pluralistic framework for philosophy of mind and show how reductionist ideas can be incorporated into it This leads to a novel synthesis of pluralism and reductionism that I call pluralistic physicalism *A Pluralist Theory of the Mind* David Ludwig, 2015-10-22 This book challenges common debates in philosophy of mind by

questioning the framework of placement problems in contemporary metaphysics The author argues that placement problems arise when exactly one fundamental ontology serves as the base for all entities and will propose a pluralist alternative that takes the diversity of our conceptual resources and ontologies seriously This general pluralist account is applied to issues in philosophy of mind to argue that contemporary debates about the mind body problem are built on this problematic framework of placement problems The starting point is the plurality of ontologies in scientific practice Not only can we describe the world in terms of physical biological or psychological ontologies but any serious engagement with scientific ontologies will identify more specific ontologies in each domain For example there is not one unified ontology for biology but rather a diversity of scientific specializations with different ontological needs Based on this account of scientific practice the author argues that there is no reason to assume that ontological unification must be possible everywhere Without this ideal the scope of ontological unification turns out to be an open empirical question and there is no need to present unification failures as philosophically puzzling placement problems

The Substance of Consciousness Brandon Rickabaugh, J. P. Moreland, 2023-09-07 A singularly powerful and rigorous argument in favor of modern substance dualism In *The Substance of Consciousness* A Comprehensive Defense of Contemporary Substance Dualism two distinguished philosophers deliver a unique and powerful defense of contemporary substance dualism which makes the claim that the human person is an embodied fundamental immaterial and unifying substance Multidisciplinary in scope the book explores areas of philosophy cognitive science neuroscience and the sociology

of mind body beliefs The authors present the most comprehensive up to date and rigorous non edited work on substance dualism in the field as well as a detailed history of how property and substance dualism have been presented and evaluated over the last 150 years Alongside developing new and updated positive arguments for substance dualism they also discuss key metaphysical notions and distinctions that inform the examination of substance dualism and its alternatives Readers will also find A thorough examination of the recent shift away from standard physicalism and the renaissance of substance dualism Comprehensive explorations of the likely future of substance dualism in the twenty first century including an exhaustive list of proposed research projects for substance dualists Practical discussion of new and rigorous critiques of significant physicality alternatives including emergentism and panpsychism Extensive treatments of philosophy of mind debates about the roles played by staunch faint hearted naturalism and theism in establishing or presuming methodology epistemic priorities and prior metaphysical commitments Perfect for professional philosophers The Substance of Consciousness will also earn a place in the libraries of consciousness researchers philosophical theologians and religious studies scholars

The Concept of Reduction Raphael van Riel, 2014-02-19 This volume investigates the notion of reduction Building on the idea that philosophers employ the term reduction to reconcile diversity and directionality with unity without relying on elimination the book offers a powerful explication of an ontological notion of reduction the extension of which is primarily formed by properties kinds individuals or processes It argues that related notions of reduction such as theory reduction and functional reduction should be defined in terms of this explication Thereby the book offers a coherent framework which sheds light on the history of the various reduction debates in the philosophy of science and in the philosophy of mind and on related topics such as reduction and unification the notion of a scientific level and physicalism The book takes its point of departure in the examination of a puzzle about reduction To illustrate the book takes as an example the reduction of water If water reduces to H₂O then water is identical to H₂O thus we get unity Unity does not come at the price of elimination claiming that water reduces to H₂O we do not thereby claim that there is no water But what about diversity and directionality Intuitively there should be a difference between water and H₂O such that we get diversity This is required for there to be directionality in a sense if water reduces to H₂O then H₂O is prior to or more basic than water At least if water reduces to H₂O then H₂O does not reduce to water But how can this be if water is identical to H₂O The book shows that the application of current models of reduction does not solve this puzzle and proposes a new coherent definition according to which unity is tied to identity diversity is descriptive in nature and directionality is the directionality of explanation

disciplines shared interest in understanding human thought perception and conceptual change the volume illustrates how representational plurality can be conducive to research and practice in varied fields Particular care is taken to emphasize points of convergence and the value of sharing discourses models justifications and theories of pluralism across disciplines The editors give ample space for philosophers cognitive scientists and educators to explicate the history and current status of representational pluralism in their own disciplines Using multiple forms of research from the relational perspective this volume will be of interest to students scholars and researchers with an interest in cognitive psychology as well as educational psychology and philosophy of science

The End of the Law? David W. Opderbeck, 2021-08-12 Does neuroscience show that all our ideas about law and ethics are false David Opderbeck answers this question with a broad and deep survey of the relationship between theology science and ethics He proposes that Christian theology which narrates the humanity and divinity of Christ in conversation with the new Aristotelianism in the philosophy of science provides a path through secular and religious fundamentalisms alike
