

Artificial Intelligence is a way of **making a computer, a computer-controlled robot, or a software think intelligently**, in the similar manner the intelligent humans think.

AI is accomplished by studying how human brain thinks, and how humans learn, decide, and work while trying to solve a problem, and then using the outcomes of this study as a basis of developing intelligent software and systems.

Philosophy of AI

While exploiting the power of the computer systems, the curiosity of human, lead him to wonder, *"Can a machine think and behave like humans do?"*

Thus, the development of AI started with the intention of creating similar intelligence in machines that we find and regard high in humans.

Goals of AI

- **To Create Expert Systems** – The systems which exhibit intelligent behavior, learn, demonstrate, explain, and advice its users.
- **To Implement Human Intelligence in Machines** – Creating systems that understand, think, learn, and behave like humans.

What Contributes to AI?

Artificial intelligence is a science and technology based on disciplines such as Computer Science, Biology, Psychology, Linguistics, Mathematics, and Engineering. A major thrust of AI is in the development of computer functions associated with human intelligence, such as reasoning, learning, and problem solving.

Out of the following areas, one or multiple areas can contribute to build an intelligent system.

Modern Perspectives on Artificial Intelligence and Law Anastasiadou, Sofia D., Seremeti, Lambrini, Masouras, Andreas, Anastasiadis, Lazaros, 2025-06-05 According to autopoietic theories when applied to the legal system and artificial intelligence AI the transformations of law and AI are not linear nor are they are separate Rather AI influences the transformation of law and law likewise influences the transformation of AI In this way many questions have arisen regarding ethics and the role of the law in the governance of AI The impact from the merge of AI and law has significant implications for society including informing policies regarding regulation and fundamental rights as well as managing safety equity and accountability in various sectors using AI in their operations Consequently an urgent need exists for ensuring risk mitigation while enhancing the benefits of AI in society Modern Perspectives on Artificial Intelligence and Law examines the interplay between the legal system and AI and the way they influence each other With a focus on AI governance it explores challenges of regulating AI while still advancing AI innovation in fields such as healthcare and in everyday human life Covering topics such as legal ontology semantic inconsistencies and intellectual property law this book is an excellent resource for statisticians law practitioners data scientists economists social scientists informaticists bio informaticists professionals researchers scholars academicians and more

Cognitive Semantics of Artificial Intelligence: A New Perspective Alexander Raikov, 2021-02-02 This book addresses the issue of cognitive semantics aspects that cannot be represented by traditional digital and logical means The problem of creating cognitive semantics can be resolved in an indirect way The electromagnetic waves quantum fields beam of light chaos control relativistic theory cosmic string recognition category theory group theory and so on can be used for this aim Since the term artificial intelligence AI appeared various versions of logic have been created many heuristics for neural networks deep learning have been made new nature like algorithms have been suggested At the same time the initial digital logical and neural network principles of representation of knowledge in AI systems have not changed a lot The researches of these aspects of cognitive semantics of AI are based on the author's convergent methodology which provides the necessary conditions for purposeful and sustainable convergence of decision making
