

## ENZYME WORKSHEETS

Fill in the gaps in the following sentences using the words in the box below.

1. Enzymes are biological catalysts that speed up chemical reactions in living organisms.
2. Enzymes are protein molecules, which are made up of long chains of amino acids.
3. The sequence and type of amino acids are different in each protein, so they produce enzymes with many different shapes and functions.
4. The shape of an enzyme is very important to its function.

Label the image below with the following terms: active site, substrate, enzyme.

5. Enzymes and their substrates are often compared to a lock and key. This is called the Lock and Key Model. Label the lock and key in the image above.
6. Explain what would happen if a substrate molecule with a different shape to the enzyme came into contact with the enzyme's active site.

In case of lock and key model of enzyme-catalyzed reactions, active site is a rigid site. A different shape of a substrate would not be entertained, hence there will be no reaction

publication process a revolution was taking place in the technologies available for the study of enzymes The techniques of molecular biology especially in genetic engineering of organisms and in site specific mutagenesis of genes were established and were being brought into use to solve many problems in enzymology Added to these fundamental and applied science not least advances the possibility of generating catalysts from antibodies has become a topic of major interest These major innovations have changed the emphasis of much bioorganic research whereas in the past the protein was often the sleeping partner in a study its detailed function is now the major focus of scientific interest Similarly in industry the potential of genetically manipulated organisms to satisfy the needs for the production of chemicals and foodstuffs has been widely recognised The second edition of Enzyme Chemistry Impact and Applications takes on board these new developments whilst maintaining the overall aims and views of the first edition Many of the chapters have been completely rewritten to take account of advances in the last five years especially with regard to the impact of biologically based technologies Although the book continues to approach its subject matter from the point of view of the chemist the increased interdisciplinary content of much modern science will be obvious from the discussion **Kinetics of Enzyme Catalysis** Bruce Palfey, Rebecca L.

Switzer, 2022-04-20 Kinetics of Enzyme Catalysis provides an introduction to the fundamentals of understanding an enzyme's catalytic mechanism and how activity is regulated which is key to understanding biology and many diseases Kinetics is at the core of enzymology as it must be for the study of catalysts Kinetics of Enzyme Catalysis examines simple kinetics and then applies those ideas to enzyme mechanisms leading to rate equations for several key mechanisms and as important illustrating some key principles A reader should therefore come away empowered with some mathematical tools allowing the analysis of catalytic cycles not discussed here and also with the understanding to predict some behaviors of enzyme kinetics without any math Methods are discussed in some detail and with them some considerations for avoiding pitfalls and collecting reliable data In addition introductions are presented to the important areas of studying inhibitors of the origins of the catalytic power of enzymes and the use of rapid reaction technology **Oswaal NEET (UG) 18 Years' Solved Papers 2006-2021,**
