

Descent with Modification VS Natural Selection

- Natural selection and descent with modification may sound like the same process, but they are not. Genetic modification(which is how descent with modification occurs) can happen for multiple reasons besides natural selection. Some modifications occur because of genetic drift or horizontal gene transfer.
- These modifications of the organisms occurs independent of selective pressures.
- Selective pressures: reason for an adaptation to be necessary to survive
 - Example: certain types of beaks were necessary in the Finches because of the selective pressure of food source.

A History and Critique of Methodological Naturalism Joseph B. Onyango Okello, 2016-07-21 Methodological naturalism is the thesis that only natural features can be factored into any legitimate explanation Moreover the thesis contends any attempt to explain natural phenomena by appealing to supernatural features is unscientific and therefore illegitimate This book argues that nothing inherently problematic afflicts possible appeals to supernatural agency in the attempt to explain select phenomena in nature Reputable philosophers of the ancient and medieval periods as well as prominent scientists of the early modern era invoked supernatural agency in their attempts to understand nature For them miraculous interventions in nature by a supernatural agent were not unreasonable However the super naturalistic worldview has been replaced by methodological naturalism The assumptions of two pivotal figures David Hume and Charles Darwin brought about this change This book shows that this change was motivated by unscientific means Hence the change itself remains inconsistent with the assumptions of methodological naturalism **Objective Ncert Based Chapterwise**
