Aerodynamic Design of Transport Aircraft Ed Obert, 2009 The origin of *Aerodynamic Design of Transport Aircraft* stems from the time when the author was appointed part time professor in the Aerospace Faculty of Delft University of Technology At the time his main activities were those of leading the departments of Aerodynamics Performance and Preliminary Design at Fokker Aircraft Company The groundwork for this book started in 1987 as a series of lecture notes consisting mainly of pictorial material with a minimum of English explanatory text After the demise of Fokker in 1996 one feared that interest in aeronautical engineering would strongly diminish As a result of this the course was discontinued and the relationship between the author and the faculty came to an end Two years later the situation was reappraised and the interest in

aeronautical engineering remained so the course was reinstated with a former Fokker colleague Ronald Slingerland as lecturer The lecture notes from these courses form the foundation of this publication *Simulation Development and Evaluation of an Improved Longitudinal Velocity-vector Control-wheel Steering Mode and Electronic Display Format* George G. Steinmetz, 1980
