Bonded Joints And Repairs To Composite Airframe Structures:

Bonded Joints and Repairs to Composite Airframe Structures Chun Hui Wang, Cong N. Duong, 2015-10-10 *Bonded Joints and Repairs to Composite Airframe Structures* is a single source reference on the state of the art in this rapidly growing area. It provides a thorough analysis of both internal and external joints and repairs as well as discussions on damage tolerance, non-destructive inspection, self-healing repairs and other essential information not only on the joints and repairs themselves but critically on how they differ from bonds and repairs to metallic aircraft. Authors Wang and Duong bring a valuable combination of academic research and industry expertise to the book, drawing on their cutting-edge composite technology experience, including analytic and computational leadership of damage and repair planning for the Boeing 787. Intended for graduate students, engineers and scientists working on the subject in aerospace industry, government agencies, research labs and academia, the book is an important addition to the limited literature in the field. Offers rare coverage of composite joints and repairs to composite structures, focusing on the state of the art in analysis. Combines the academic, government and industry expertise of the authors, providing research findings in the context of current and future applications. Covers internal and external joints and repairs as well as damage tolerance, non-destructive inspection and self-healing repairs. Ideal for graduate students, engineers and scientists working in the aerospace industry, government agencies, research labs and academia.

Bonded Repair of Aircraft Structures A. Baker, Jones, 2012-12-06 The conventional approach to through-life support for aircraft structures can be divided into the following phases: i) detection of defects, ii) diagnosis of their nature and significance, iii) forecasting future behaviour, prognosis and iv) prescription and implementation of remedial measures, including repairs. Considerable scientific effort has been devoted to developing the science and technology base for the first three phases. Of particular note is the development of fracture mechanics as a major analytical tool for metals for predicting residual strength in the presence of cracks, damage tolerance and rate of crack propagation under service loading. Intensive effort is currently being devoted to developing similar approaches for fibre composite structures, particularly to assess damage tolerance and durability in the presence of delamination damage. Until recently, there has been no major attempt to develop a science and technology base for the last phase, particularly with respect to the development of repairs. Approaches are required which will allow assessment of the type and magnitude of defects amenable to repair and the influence of the repair on the stress intensity factor or some related parameter. Approaches are also required for the development and design of optimum repairs and for assessment of their durability.
