Apics Manual:

Manual of Deixis in Romance Languages Konstanze Jungbluth, Federica Da Milano, 2015-10-16 Deixis as a field of research has generated increased interest in recent years. It is crucial for a number of different subdisciplines: pragmatics, semantics, cognitive and contrastive linguistics, to name just a few. The subject is of particular interest to experts and students, philosophers, teachers, philologists and psychologists interested in the study of their language or in comparing linguistic structures. The different deictic structures not only the items themselves but also the oppositions between them reflect the fact that neither the notions of space, time, person nor our use of them are identical cross culturally. This diversity is not restricted to the difference between languages but also appears among related dialects and language varieties. This volume will provide an overview of the field focusing on Romance languages but also reaching beyond this perspective. Chapters on diachronic developments, language change, comparisons with other non-European languages and on interfaces with neighboring fields of interest are also included. The editors and authors hope that readers regardless of their familiarity with Romance languages will gain new insights into deixis in general and into the similarities and differences among deictic structures used in the languages of the world.
