Building Information Modelling (BIM) is a design and construction software that manages not just graphics but also information that enables the automatic generation of drawings and reports, design analysis, schedule simulation, facilities management, and cost analysis, ultimately enabling any building team to make better informed decisions. This allows a range of professionals: architects, engineers, construction managers, surveyors, cost estimators, project managers, and facility managers to share this information throughout a building's lifecycle. BIM is now recognized worldwide for the

efficiencies it delivers in terms of working collaboratively communication processes cost savings and a property's lifecycle management With the widespread adoption of BIM BIM Managers have become a much needed new breed of professionals in architectural engineering and construction practice Their role is often misunderstood and ill defined and such are the day to day deliverables that they are likely to face The BIM Manager's Handbook provides an in depth account of the breadth of activities that any BIM Manager or staff member who is actively engaged in the delivery of project is required to undertake Providing prereleases of the final work The BIM Manager's Handbook ePart series isolates significant topics around BIM management In the sixth and final ePart BIM is taken to the next level by outlining what is required to truly excel as a BIM Manager It highlights how BIM Managers acquire the necessary communication skills to maximize an efficient information flow between the BIM Manager and others It illustrates how BIM Managers tie their activities to cutting edge BIM research and development globally Lastly this ePart lays out how to promote BIM excellence both within an organization and beyond
