Fixed Points Stepan Karamardian, 2014-05-10 Fixed Points Algorithms and Applications covers the proceedings of the First International Conference on Computing Fixed Points with Applications held in the Department of Mathematical Sciences at Clemson University Clemson South Carolina on June 26 28 1974 This book is composed of 21 chapters and starts with reviews of finding roots of polynomials by pivoting procedures and the relations between convergence and labeling in approximation algorithm The next chapters deal with the principles of complementary pivot theory and the Markovian decision chains the method of continuation for Brouwer fixed point calculation a fixed point approach to stability in cooperative games and computation of fixed points in a nonconvex region Other chapters discuss a computational comparison of fixed point algorithms the fundamentals of union jack triangulations and some aspects of Mann's iterative method for approximating fixed points The final chapters consider the application of fixed point algorithms to the analysis of tax policies and the pricing for congestion in telephone networks This book will prove useful to mathematicians computer scientists and advance mathematics students

Algorithms for Solving Common Fixed Point Problems Alexander J. Zaslavski, 2018-05-02 This book details approximate solutions to common fixed point problems and convex feasibility problems in the presence of perturbations Convex feasibility problems search for a common point of a finite collection of subsets in a Hilbert space common fixed point problems pursue a common fixed point of a finite collection of self mappings in a Hilbert space A variety of algorithms are considered in this book for solving both types of problems the study of which has fueled a rapidly growing area of research This monograph is timely and highlights the numerous applications to engineering computed tomography and radiation therapy planning Totalling eight chapters this book begins with an introduction to foundational material and moves on to examine iterative methods in metric spaces The dynamic string averaging methods for common fixed point problems in normed space are analyzed in Chapter 3 Dynamic string methods for common fixed point problems in a metric space are introduced and discussed in Chapter 4 Chapter 5 is devoted to the convergence of an abstract version of the algorithm which has been called component averaged row projections CARP Chapter 6 studies a proximal algorithm for finding a common zero of a family of maximal monotone operators Chapter 7 extends the results of Chapter 6 for a dynamic string averaging version of the proximal algorithm In Chapters 8 subgradient projections algorithms for convex

feasibility problems are examined for infinite dimensional Hilbert spaces

Solutions of Fixed Point Problems with Computational Errors Alexander J. Zaslavski, 2024-03-19 The book is devoted to the study of approximate solutions of fixed point problems in the presence of computational errors It begins with a study of approximate solutions of star shaped feasibility problems in the presence of perturbations The goal is to show the convergence of algorithms which are known as important tools for solving convex feasibility problems and common fixed point problems The text also presents studies of algorithms based on unions of nonexpansive maps inconsistent convex feasibility problems and split common fixed point problems A number of algorithms are considered for solving convex feasibility problems and common fixed point problems The book will be of interest for researchers and engineers working in optimization numerical analysis and fixed point theory It also can be useful in preparation courses for graduate students The main feature of the book which appeals specifically to this audience is the study of the influence of computational errors for several important algorithms used for nonconvex feasibility problems

The Computation of Fixed Points and Applications M. J. Todd, 2013-03-09 Fixed point algorithms have diverse applications in economics optimization game theory and the numerical solution of boundary value problems Since Scarf's pioneering work [56, 57] on obtaining approximate fixed points of continuous mappings a great deal of research has been done in extending the applicability and improving the efficiency of fixed point methods Much of this work is available only in research papers although Scarf's book [58] gives a remarkably clear exposition of the power of fixed point methods However the algorithms described by Scarf have been superseded by the more sophisticated restart and homotopy techniques of Merrill [8, 9] and Eaves and Saigal [1, 16] To understand the more efficient algorithms one must become familiar with the notions of triangulation and simplicial approximation whereas Scarf stresses the concept of primitive set These notes are intended to introduce to a wider audience the most recent fixed point methods and their applications Our approach is therefore via triangulations For this reason Scarf is cited less in this manuscript than his contributions would otherwise warrant We have also confined our treatment of applications to the computation of economic equilibria and the solution of optimization problems Hansen and Koopmans [28] apply fixed point methods to the computation of an invariant optimal capital stock in an economic growth model Applications to game theory are discussed in Scarf [56, 58] Shapley [59] and Garcia Lemke and Luethi [24] Allgower [1] and Jeppson [31] use fixed point algorithms to find many solutions to boundary value problems

Recent Developments in Fixed-Point Theory Mudasir Younis, Lili Chen, Deepak Singh, 2024-07-03 This contributed book has a comprehensive collection of 17 carefully curated chapters that delve into the latest advancements in fixed point theory and its diverse applications It bridges the gap between theory and practicality providing readers with a deep understanding of fundamental theorems related to the existence and uniqueness of maps The book covers a wide array of applications each showcasing the relevance of fixed point theory in various domains Readers will explore applications dealing with topological properties the resolution of integral equations across multiple classes nonlinear differential equations

fractional differential equations dynamic programming problems and engineering science related challenges This diverse range of topics ensures that the book caters to both theoretical researchers and practitioners seeking real world solutions The primary feature of the book is the pictorial depictions of examples making complex concepts more accessible and understandable These visual representations enhance the learning experience enabling readers to grasp the enunciated outcomes effortlessly The book stands as an essential reference for scholars researchers and professionals interested in the theoretical foundations and practical implications of fixed point theory Its blend of theoretical insights and real world applications makes it an indispensable addition to the field of mathematics and its interdisciplinary applications
