Functional Neuroimaging in Exercise and Sport Sciences Henning Boecker, Charles H. Hillman, Lukas Scheef, Heiko K. Strüder, 2012-06-19 Regular physical exercise is associated with substantial health benefits Recent evidence not only holds for cardiovascular effects promoting physical health but also for the central nervous system believed to promote brain health Moderate physical exercise has been found to improve learning memory and attentional processing with recent research indicating that neuroprotective mechanisms and associated plasticity in brain structure and function also benefit Physical exercise is also known to induce a range of acute or sustained psychophysiological effects among these mood elevation stress reduction anxiolysis and hypoalgesia Today modern functional neuroimaging techniques afford direct measurement of the acute and chronic relation of physical exercise on the human brain as well as the correlation of the derived physiological in vivo signals with behavioral outcomes recorded during and

after exercise A wide range of imaging techniques have been applied to human exercise research ranging from electroencephalography EEG magnetoencephalography MEG near infrared spectroscopy NIRS magnetic resonance imaging MRI to positron emission tomography PET All of these imaging methods provide distinct information and they differ considerably in terms of spatial and temporal resolution availability cost and associated risks However from a multimodal imaging perspective neuroimaging provides an unprecedented potential to unravel the neurobiology of human exercise covering a wide spectrum ranging from structural plasticity in gray and white matter network dynamics global and regional perfusion evoked neuronal responses to the quantification of neurotransmitter release The aim of this book is to provide the current state of the human neuroimaging literature in the emerging field of the neurobiological exercise sciences and to outline future applications and directions of research *Ethical Standards and Professional Credentials in the Practice of Exercise Physiology* Tommy Boone,2007
